RISE ETHIOPIA

R1-B HOUSEHOLD SURVEY

FIELDWORKER MANUAL

2011 E.C.

This manual explains how to conduct the fieldwork at the beginning of the school year (R1-B) in the RISE Ethiopia Household Survey. Please read it carefully before you begin work, and refer to it often. If you have any questions that are not covered in this manual, ask your supervisor. If your team encounters any challenges not explained in this manual, seek advice from EDRI.

NOTE: Any changes to the instructions in this manual will be covered during training. Please make sure you record these changes carefully in the appropriate sections or the 'Notes' pages provided at the end of the manual. Ask the EDRI fieldwork coordinators for clarifications where you are unsure of any instructions.

1. Information about the survey

RISE Ethiopia: School Survey and Household Survey

1.1 RISE (Research on Improving Systems of Education) is a large-scale research programme that seeks to understand how school systems in low and middle-income countries can deliver better quality education for all. It is being conducted in Ethiopia, India, Indonesia, Pakistan, Tanzania and Vietnam.

RISE Ethiopia is examining the design and implementation of large-scale government education reforms, the General Education Quality Improvement Program (GEQIP). The third phase of the reforms, 'GEQIP E', are being implemented from 2011 to 2015 E.C. RISE Ethiopia aims to understand whether and how these reforms improve learning outcomes for primary school students over this period.

1.2 RISE Ethiopia is starting with a longitudinal **school survey** in 2011 E.C. The survey will include approximately 4,500 Grade 1 students and 4,500 Grade 4 students in 7 regions (Addis Ababa, Amhara, Benishangul-Gumuz, Oromia, SNNP, Somali and Tigray). Data will be collected on students' learning outcomes, and on school, class and teacher characteristics. Two rounds of the school survey will take place in 2011 E.C., at the beginning and end of the school year. Two further rounds of data collection will take place in 2014 E.C., when the RISE Students are in Grades 4 and 7.

1.3 RISE Ethiopia is also conducting a linked **household survey** in 2011 E.C. to collect data on the socio-economic status, family and educational background of the RISE Students. A follow-up household survey will be conducted in 2014 E.C.

The Household Survey sample

1.4 As described above, the RISE Ethiopia household survey sample is linked to the school survey sample. Approximately 9,000 households will be included in the household survey; these will be the households where the 'RISE Students' live – i.e., the Grade 1 and Grade 4 students who have participated in the RISE school survey.

Instruments to be used at each household

1.4 At each household, a **household questionnaire** will be used to collect data. Detailed notes on how to complete each module of the household questionnaire are provided in Section 3 of this manual.

The household questionnaire will be administered via a Computer Assisted Personal Interview (CAPI), and each fieldworker will be provided with a tablet in order to do this. Fieldworkers will also have the following supplementary, paper-based materials to help them administer the household questionnaire:

- Paper copies of the Household Roster
- Respondent cards: 3.2 Household Health; 4.1 Primary Caregiver Literacy; 5.4 Time Use; 7.2 Attitudes to Education

1.5 Each fieldworker will be provided with a laminated set of respondent cards – this set is to be used at each household – and a sufficient number of paper copies of the Household Roster based on the number of households to be visited. The questionnaire and supplementary materials will be provided in the languages shown in Figure 1. Where the household questionnaire is not provided in regional languages, local guides will be recruited to interpret the interview questions and participant responses.

Figure 1: Instrument language by region

Instrument		Region						
		Addis	Amhara	Benishangul	Oromia	SNNP	Somali	Tigray
1	Household questionnaire (CAPI)	Amharic	Amharic	Amharic	Afan Oromo	Amharic	Amharic	Tigrigna
2	Household roster	Amharic	Amharic	Amharic	Afan Oromo	Amharic	Amharic	Tigrigna
3	Respondent Card 3.2: Household Health	Amharic	Amharic	Amharic, Berta	Afan Oromo	Amharic, Hadiya, Sidama, Wolayta	Somali	Tigrigna
4	Respondent Card 4.1: Primary Caregiver Literacy	Amharic	Amharic	Amharic, Berta	Afan Oromo	Amharic, Hadiya, Sidama, Wolayta	Somali	Tigrigna
5	Respondent Card 5.4: Time Use	Amharic	Amharic	Amharic, Berta	Afan Oromo	Amharic, Hadiya, Sidama, Wolayta	Somali	Tigrigna
6	Respondent Card 7.2: Attitudes to Education	Amharic	Amharic	Amharic, Berta	Afan Oromo	Amharic, Hadiya, Sidama, Wolayta	Somali	Tigrigna

1.6 Figure 2 gives an overview of instruments and materials required at each household. Fieldwork teams should make sure that they have enough copies of each instrument and supplementary materials before visiting a household.

Figure 2: Instruments required at each household

Instrument		Copies	Notes
1	Household questionnaire	1 per household	To be completed via CAPI
2	Household roster	1 per household	Paper copy to be completed before entering data via CAPI, to ensure accuracy and for reference during household questionnaire administration.
3	Respondent cards (3.2, 4.1, 5.4 and 7.2)	1 per fieldworker	Each fieldworker will be provided with a laminated set of Respondent Cards in the language(s) appropriate for their region. Fieldworkers will use one set of Respondent Cards at all households which they visit.

2. Conducting the survey

Preparing to visit households

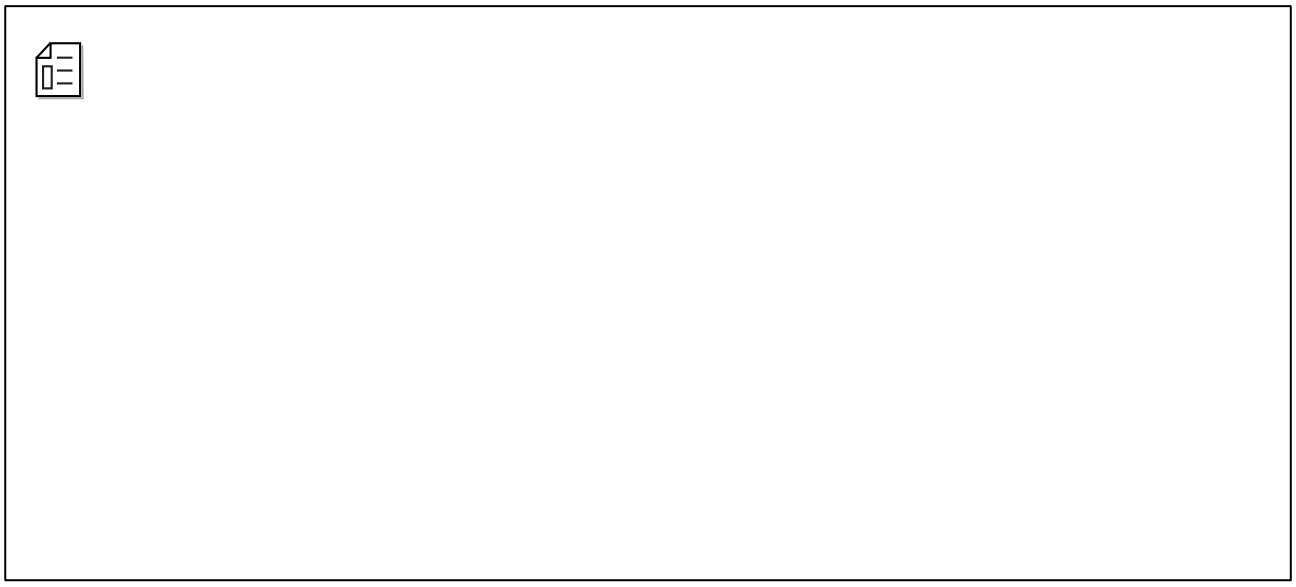

2.1 Each household survey supervisor will have a Student List, which provides basic information on the RISE Students who live in different kebeles: full name (first name + father's name + grandfather's name), gender, grade and school name, plus School ID, Class ID and Student ID. The fieldwork team will decide the order for household visits based on this information and their local knowledge.

2.2 The household team will only visit the households of RISE students who have participated in the school survey. The household survey will start approximately one week later than the school survey, which will allow the RISE School Survey Supervisor in each region to contact the Household Survey Supervisor after data collection in each school is complete. The School Survey Supervisor will inform the Household Survey Supervisor which RISE students have participated in the School Survey.

2.3 When contacted by the School Survey Supervisor (via telephone or in person), it is very important that the Household Survey Supervisor confirms the School ID, Class ID, Student ID, full name, gender and grade of each student who is to be included in the household survey. This will allow us to accurately link school and household data later on.

2.4 The Household Survey Supervisor must record on their Student List which students have been selected for the household survey by completing column 8 (see Figure 3).

Figure 3: Example of Student List

This Student List tells you that there are six potential RISE Students who live in Wereilo kebele, Werebabo woreda. They are all from Sunshine Full Cycle Primary School. The Household Survey Supervisor speaks to the School Survey Supervisor; she says that Rediet, Samrawit, Elyase, Feyedi and Abubeker all completed tests in the School Survey. After carefully checking that the pre-filled information in Columns 1 – 7 on the Student List matches the School Survey Supervisor's information (including full student names), the Household Survey Supervisor enters '01' into Column 8 for these students, and '00' for Asnaku (because she did not complete a test during the School Survey). The Household Survey Supervisor will now arrange household visits to the households of the five selected RISE students (Rediet, Samrawit, Elyase, Feyedi and Abubeker) in this kebele.

2.5 The household survey supervisor will then contact the kebele office to confirm the exact locations of the RISE Students' households, and to confirm permissions to conduct the survey in these households. The information in Figure 4 can be used as a reference during this visit. Note that there is additional information which you will read to survey participants before they complete the household questionnaire (see Figure 7).

Figure 4: Background information to introduce the household survey

We are visiting your school to invite you to participate in a study of Ethiopian schools. The project is called RISE Ethiopia, and it is examining the quality of primary education in seven Ethiopian regions: Amhara, Benishangul Gumuz, Oromia, SNNPR, Somali, Tigray and Addis Ababa. The project is funded by international organisations, and is being conducted by the Ethiopian Development Research Institute (EDRI, Addis Ababa), Addis Ababa University and the University of Cambridge (UK). Findings from the research project are intended to help government officials and school-level stakeholders in Ethiopia and in other countries to improve the quality of primary education.

We plan to collect information from selected households in this woreda. Children from theses households have participated in a linked school survey, and we wish to collect information about their families' socio-economic status and educational background at the household level. We will administer a household questionnaire to the heads of each household and primary caregivers to do this.

The information we collect in this study will be made anonymous. This means that participants' data will not be shared with anyone else in the woreda, and it will not be possible to identify children or other household members from the data we produce.

Your participation in this survey is voluntary – you may choose not to participate, and even if you do agree to participate you may withdraw at any time. If you are happy to participate, your involvement is valuable to the RISE Ethiopia research project, and will help provide important information to improve the quality of education in Ethiopia. We thank you for your time. If you do not want to participate, please inform one of the researchers.

Arranging the fieldwork schedule

2.4 Once the supervisor has information on the exact locations of each household to be visited, it is their responsibility to arrange fieldwork visits to these households.

2.5 The household questionnaire should take 1-2 hours to complete at each household. It should therefore be possible for each fieldworker to complete 4 household questionnaires per day, if the households are located within close proximity of each other to minimize travel time. The supervisor should arrange the fieldwork schedule accordingly, so that it is possible for all fieldworkers on the team to visit 4 households per day on as many days as possible.

2.6 In order to avoid inconvenience for participants, household visits should be planned between 8AM and 5PM. The last household visit of the day should start no later than 5PM.

Informed consent

2.7 All survey participants should have the survey explained to them in a language they can understand. They can choose not to participate if they wish. The household head and primary caregiver of the RISE Student should be informed as soon as you arrive at a household (see Box 1 on identifying the household head and primary caregiver). The statement in Figure 4 can be read to all participants to provide them with consistent information about the research project, but note that you will read additional information to participants before you begin administering the household questionnaire (see Figure 7).

Arriving at the household

2.8 On arrival at the household, introduce yourself to the head of the household. You should introduce the Household Survey, and then confirm that the identified RISE Student lives here – give the child's full name, gender, grade and the name of their school (recorded on the Student List) in order to do this.

2.9 Once you have confirmed that this is the home of the RISE Student, gain the household head's informed consent for the survey to take place at their household. Use the wording in Figure 7 to guide this introduction and consent.

2.10 If the household head gives consent for fieldwork to continue, ask whether the child's primary caregiver is at home and available to participate in the survey as well. You should then introduce the Household Survey and gain the primary caregiver's informed consent.

2.11 Once both the household head and primary caregiver have given their informed consent to participate in the survey, inform them that it should take 1-2 hours to complete the questionnaire, and that you would like to do this in a quiet area where you cannot be overheard. This is to ensure confidentiality while the questionnaire is completed.

2.12 Questionnaire Modules 1-3 can be completed by the household head or any other informed household member, while Modules 4-7 must be completed by the primary caregiver (see Figure 5). Inform the household head that you would like to ask him/her some of the questions, but that most of the questions will be answered by the primary caregiver. If the household head is not available to participate, the primary caregiver or any other informed household member may participate on his/her behalf. However, if the primary caregiver is not available to participate, you must not administer the questionnaire – you should arrange another visit when the primary caregiver will be available.

BOX 1:
Defining a household, the household head and the primary caregiver

A **household** is defined as a person or group of related and unrelated persons who live together in the same dwelling unit(s) or connected premised, who acknowledge one adult member as head of the household.

A **household member** is a person who usually lives in the household, i.e. for 6 or more months of the year

The **household head** is the adult member of the household who has primary responsibility for managing resources for all dwelling units or connected premises. If a respondent considers more than one person as the household head, ask which of these people controls the resources / income of the household. If still more than one person is identified, ask which of these people contributes most of the resources / income in the household.

The **primary caregiver** is the person who is responsible for the day-to-day care of the RISE Student, referred to as the 'index child' in the questionnaire. Note that in some cases, the household head and primary caregiver may be the same person.

Figure 5: Who should complete each module?

Module	Respondent
Module 1	Can be completed by the household member who is best able to provide relevant information: either the household head, or the primary caregiver, or another household member.
Module 2	Can be completed by the household member who is best able to provide relevant information: either the household head, or the primary caregiver or another household member.
Module 3	Can be completed by the household member who is best able to provide relevant information: either the household head, or the primary caregiver or another household member.
Module 4	Must be completed by the index child's primary caregiver.
Module 5	Must be completed by the index child's primary caregiver.
Module 6	Must be completed by the index child's primary caregiver.
Module 7	Must be completed by the index child's primary caregiver.

Figure 6: Principles for conducting the household survey

General	
1	There is no rush to collect data: teams are large and plenty of time has been allowed.
2	You will only visit selected households on the Student List, based on information given to you by the RISE School Survey Supervisor in your region. This information may be shared via telephone or in person.
3	Household visits will be planned according to kebele, so that each fieldworker can visit 4 households per day.
4	When you arrive at a household, confirm the full name, grade, gender and school name for the index child before starting, to make sure that you are at the right household.
5	Ensure that the index child's primary caregiver is available at the time of your household visit. If not, you must rearrange this household visit at another time when they will be available.
Completing the questionnaire	
6	Administer the household questionnaire in a quiet space, so that the respondents have privacy while completing the questionnaire.
7	Carefully enter the School ID, Class ID and Student ID (referring to the Student List) before starting the questionnaire.
8	Where an interpreter is used, make sure you read out each question slowly and clearly, so that the interpreter can translate correctly.
9	In case the respondents and/or interpreter are unsure what a question means, be ready to offer the clarifications provided in this manual.
10	Complete the paper version of the Household Roster (Module 1.1) first. Only complete the Household Roster via CAPI once you have checked the information is correct with the respondent.
11	Modules 1, 2 and 3 may be completed by the household head, the primary caregiver or another informed household member
12	Modules 4 – 7 must be completed by the primary caregiver.
13	Ideally you should arrange the questionnaire administration in one sitting (1-2 hours). If there are any unforeseen interruptions, make sure you save the partial case via CAPI, and resume this case after the interruption.
Finishing the questionnaire	
14	When the questionnaire is complete, thank the primary caregiver and the household head for their time and participation. Before leaving, answer any questions they have for you.

3. Completing the questionnaire

General principles

3.1 There is no rush to collect data; make sure you take the time to read each question clearly and slowly, and give participants sufficient time to reflect and provide you with accurate responses.

3.2 Make sure that you administer the household questionnaire in a quiet space where you cannot be overheard; if other household members or neighbours try to sit with you while the questionnaire is administered, politely inform them that the questionnaire must be administered privately, and ask them to leave. If they are curious about what you are doing, tell them that you are willing to answer any questions they have about the survey after the questionnaire has been completed.

3.3 Where an interpreter is being used (which will be the case in selected woredas in Benishangul Gumuz, SNNP and Somali), it is particularly important that you read each question clearly and slowly so that they are able to understand the meaning of each question. Tell them that they should feel free to ask you if they are unsure about the meaning of a question or listed answer options. The interpreter should also translate any questions or uncertainties expressed by the participants – but they should not offer their own answers on behalf of the participants.

Beginning the questionnaire

3.4 Begin by reading the statement in Figure 7 to the household head and primary caregiver. Note that this statement will also appear at the beginning of the household questionnaire CAPI program.

3.5 Once the household head and primary caregiver agree to participate, record this in the CAPI program, and then enter the following information on the index child:

- 0.1 Full name of Index Child's School (from Student List)
- 0.2 Grade in which Index Child is enrolled in 2011 E.C. (from Student List)
- 0.3 Index Child's School ID (from woreda / Student List)
- 0.4 Index Child's Class ID (from Student List)
- 0.5 Index Child's Student ID (from Student List)

It is very important that you enter this information carefully and accurately, as this will allow us to link each index child's household and school survey data.

3.6 As you enter fields 0.1 and 0.2, confirm with the household head and/or primary caregiver that the information is correct. You do not need to confirm the information in fields 0.4 – 0.6 with household members; the school, class and student IDs are from the RISE school survey.

3.7 Next, enter information on household location (region, zone, woreda, kebele and GPS location) in fields 0.7 – 0.11.

3.8 You should then ask if any household member owns a mobile phone. If so, enter the mobile phone number of one household member into field 0.14., and then enter the name of this household member into field 0.15.

3.9 Next, ask for the details of at least two (and ideally three) contacts – neighbours, friends or relatives – who can be contacted if the household moves. Explain that this is because we will come back for a follow-up survey in 2014 E.C.

3.10 You are now ready to begin administering the questionnaire.

Figure 7: Informed consent statement for questionnaire participants

My name is _____. I am working with the Ethiopian Development Research Institute. We are conducting a survey about education and other topics in schools and households all over Ethiopia. The aim of this survey is to help improve the quality of education in Ethiopia. One of your children, [INDEX CHILD], has been selected for inclusion in the survey at their school. They have been asked to participate in tests to assess their numeracy and literacy skills. Their results will not contribute to their school grades, but will be used to examine the quality of learning at their school. We would like to interview you so we can learn more about their home background.

The questions usually take around 1 – 2 hours. All the answers you give will be confidential and will not be shared with anyone other than members of our survey team. If you are happy to participate in the survey, we will provide compensation for your time, but the aim of the survey is to collect information to inform policy and improve education – you will not directly benefit from participating. You do not have to participate in the survey, but we hope that you agree to participate since your views are important. If I ask you any questions that you don't want to answer, just let me know and I will go onto the next question, or you can stop the interview.

Are you happy to participate? Are you happy for your child's test results to be used in our survey?

Specific guidance on completing the questionnaire

MODULE ONE
HOUSEHOLD COMPOSITION

This module allows you to collect basic information about all household members. If one or both of the index child's biological parents does not live in the households, the module also allows you to collect basic information about them.

Module One can be completed by the household head, the primary caregiver or another household member who is best able to provide information on household composition.

1.1 Household Roster

The household roster allows you to enter information about all household members. A household member is defined as a person who usually lives in the household – i.e. for 6 or more months of the year.

You should first enter the names of all household members in Column 2 on one of the provided paper copies of the household roster (making sure you use a new paper copy of the household roster for each household), and then check this carefully with the respondent. Once you are confident that you have recorded the correct full name of each household member, you may then enter the information via CAPI using your tablet.

Q.2 Start by filling in Q.2 for all household members. The first row (HHM ID = 01) must always be used for the Index Child.

Before proceeding, check with the respondent that you have written down all household members' names correctly, and that you have not missed out any household members. Then, proceed to enter all household members' names via CAPI.

Q.3-4 Complete for all household members.

Q.5 [SKIP PATTERN] Q.5 will be skipped unless the household member is less than 1 year old.

Q.6 Complete for all household members. Enter '88' for the household head.

Q.7 Complete for all household members.

Q.8 Make sure that only one household member is recorded as the index child's primary caregiver.

Q.9-11 Complete for all household members.

Q.12 [SKIP PATTERN] Q.12 will be skipped unless the household member has never attended school.

Q.16 Enter the ID of the household head. See Box 1 for the definition of the household head.

Q.17 Select 'yes' once you have entered the information from the household roster via CAPI.

Q.18 A 'polygamous household' means that the household head has more than one spouse.

If the respondent says 'yes', check the paper copy of the household roster to confirm that more than one person is recorded as a spouse of the household head (Q.6 = 01 for two or more people).

If the respondent says 'no', check that only one person is recorded as the spouse of the household head in the roster (Q.6 = 01 for only one person).

When performing these checks, ask the respondent to clarify any inconsistencies, and update the household roster and/or the response to Q.18 accordingly.

Q.19 Enter the ID of the respondent for this module, referring to the paper copy of the household roster.

1.2 Parental Background Information

[SKIP PATTERN] This sub-module will only be completed if the biological mother and/or father of the index child is not in the household roster – i.e., if one or both of these people does not usually live in the household.

We include this sub-module so that we can collect basic information on the index child's biological parents even if the mother and/or father lives somewhere else, or if the mother and/or father has died.

Q.20 Enter 'yes' if the index child's biological father has been recorded on the household roster (Q.9 ≠ 88 or 99). Check the paper version of the roster to confirm this.

Q.21-26 [SKIP PATTERN] Q.21 – 26 will be skipped unless the index child's biological father does not live in the household.

Q.26 Enter 'yes' if the index child's biological mother has been recorded on the household roster (Q.10 ≠ 88 or 99). Check the paper version of the roster to confirm this.

Q.27-31 [SKIP PATTERN] Q.27 – 31 will be skipped unless the index child's biological mother does not live in the household.

MODULE TWO
HOUSEHOLD LIVELIHOOD AND RESOURCES

This module allows you to collect information about the household's physical construction; assets owned by household members; access to resources, food and public programmes; and the impact of long-term shocks on the household.

Module Two can be completed by the household head, the primary caregiver or another household member who is best able to provide information on household livelihood and resources.

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this.

2.1 Household Construction

Complete Q. 2 – 4 in this sub-module by observing the materials used in the construction of the household. Note that you should record the materials that you can see. For example, when recording the main material of the floor (Q.4), if the floor is completed covered with carpet (i.e., you cannot see the material underneath), enter 'carpet' as the main material of the floor. However, if there is a carpet used to partially cover a visible wooden floor (i.e. a rug or a mat), you would enter 'wood planks' as the main material of the floor.

Note that if more than one material is used for the exterior walls, roof or floor of the dwelling, you should record the main, visible material.

Q.2 Observe the main material of the exterior walls of the main dwelling to complete this question.

NOTE: The main dwelling is defined as the building in which the majority of the household members sleep.

Q.3 Observe the main material of the roof of the building to complete this question.

Q.4 Observe the main material of the floor of the dwelling to complete this question.

Q.5-7 Ask these questions (and all subsequent questions in the module) to the respondent, and enter their responses.

NOTE: a 'room' is defined as a space which is enclosed by permanent partitions that extend from the floor to the ceiling.

If a space is separated into different areas using non-permanent partitions – e.g. cloth hanging from the ceiling – it is considered to be one room.

If a space is separated into different areas using partitions which do not extent from the floor to the ceiling, it is considered to be one room.

2.2 LIVESTOCK

Q.8 Enter the number of each type of animal owned by the household.

Q.9 [SKIP PATTERN] Q.9 will be skipped for any type of animal not owned by the household.

Otherwise, enter the respondent's estimated value of all the animals of each type listed if they were sold today, in Ethiopian Birr. If the respondent is not sure, ask them to estimate the value of one of these animals, then multiply this estimate by the number given in response to Q.8.

In case the respondent is not comfortable telling you how much they would receive for selling their animals (i.e. because they feel it is unlucky to say this), you may instead as 'If you were to buy all your currently owned animals of this type today, how much would you pay for them in Ethiopian Birr?'.

2.3 HOUSEHOLD ASSETS AND LIVELHOODS

Q.10 Record whether any household member owns each listed item.

Q.11 [SKIP PATTERN] Q.11 will be skipped for any listed item not owned by household members.

Otherwise, enter the total number of each listed item owned by household members.

Q.12 Read each statement to the respondent. After reading each statement, ask whether it describes the household's main source of income. If not, go on to read the next statement. If none of the statements reflects the household's main source of income, enter '07' ('The most important source of income comes from another source, not listed here').

2.4 ACCESS TO RESOURCES

Q.13 'Working electricity' means that the household is connected to a source of electricity which provides electricity and allows household members to use electrical items. The source of electricity can be a public grid, a privately-owned generator or another source.

If the household is connected to a source of electricity and is sometimes affected by power cuts, we still consider this to be working electricity.

If the household is connected to a source of electricity but never receives electricity from the source, this is not 'working electricity'.

Q.14-17 If the household uses more than one source of drinking water / toilet facility / type of fuel, record the response for source / facility that is used most often in each case.

2.5 HOUSEHOLD FOOD SECURITY

Q.18 'Problems satisfying the food needs of the household' means that it was not possible for all household members to eat as much food as they needed / as much food as they usually eat.

Q.19 If the respondent says that the household was affected by a shortage of food for a whole season (i.e. several months), ask them which month in this season was the worst month.

2.6 ACCESS TO PUBLIC PROGRAMMES

Q.20-23 The Productive Safety Net Programme (PSNP) is the Government of Ethiopia's rural safety net for food insecure households. It provides cash and/or food transfers to these households.

[SKIP PATTERN] Q.21 will be skipped if the household has never received any payments for Public Works employment on the PSNP.

[SKIP PATTERN] Q.23 will be skipped if the household has never received any Direct Support payments from the PSNP.

Q.24-26 These questions relate to any assistance that the index child has received for their education in the 12 months.

[SKIP PATTERN] Q.25 and Q.26 will be skipped if the index child did not receive any assistance with education in the past 12 months.

Q.26: Read out the answer options to the respondent, and record their answer.

Q.27-29 The General Education Quality Improvement Programme (GEQIP) is a programme run by the Government of Ethiopia which started in 2000 E.C. It includes providing new learning materials; training teachers; providing school grants; developing school improvement plans; and involving parents and communities in schools.

[SKIP PATTERN] Q.28 will be skipped if the respondent has heard of GEQIP by name. Otherwise, Q.28 is a 'check' question to see whether the respondent is familiar with the programme interventions even if they do not know the programme by name.

[SKIP PATTERN] Q.29 will be skipped if the respondent has not heard of GEQIP by name, and is not familiar with the programme interventions.

2.7 IMPACT OF LONG-TERM SHOCKS

In this sub-module, we are interested in any shocks that have affected the household in the last 5 years (E.C. 2006 – 2010). A 'shock' is an event that led to a serious reduction in the household's asset holdings, caused the household income to fall substantially, and resulted in a significant reduction in consumption.

Note on option (d): 'loss of wage employment' can refer either to unexpected job loss (being fired) or expected job loss (the end of an employment contract).

Q.30 Ask the respondent if the household experienced each listed shock.

Q.31 [SKIP PATTERN] Q.31 will be skipped for any listed shocks that the household did not experience.

Otherwise, if the shock occurred in 2 or more years, ask the respondent to name the worst years of the shock. Record these years, starting with the worst shock, then the second worst shock, then the third worst shock. Use the Ethiopian Calendar.

Q.32 [SKIP PATTERN] Q.32 will be skipped for any listed shocks that the household did not experience.

Otherwise, ask the respondent what the effect of the shock was on the household, and enter the appropriate code.

MODULE THREE
HOUSEHOLD EDUCATION AND HEALTH

This module allows you to collect information about the education and health of all children aged 3 – 17 years who live in the household.

Module Three can be completed by the household head, the primary caregiver or another household member who is best able to provide information on household livelihood and resources.

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this.

3.1 HOUSEHOLD EDUCATION

This sub-module allows you to collect information about the education of all children aged 3 – 17 years who live in the household. The CAPI program will only allow you to enter this information for children in this age range. However, if you are unsure about which household members are displayed in this sub-module, cross-check the names and IDs with your paper roster.

Q.2 Complete for all children.

NOTE: 'pre-school' refers to both formal pre-school (i.e., when children receive a certificate at the end of their attendance), and informal pre-school (i.e., some religious pre-schools which do not provide certificates at the end).

Q.3 [SKIP PATTERN] Q.3 will be skipped if the child did attend pre-school.

Otherwise, use the provided codes to enter the reason the child did not attend pre-school.

Q.4-6 [SKIP PATTERN] Q.4 – 6 will be skipped if the child did not attend pre-school.

Otherwise, enter the requested information on the kind of pre-school attended, length of time pre-school was attended and the age of the child when they started pre-school.

Q.7-9 [SKIP PATTERN] The CAPI program includes a control so that these questions are only available for children who are currently not in school, but have previously attended school.

Q.10-11 [SKIP PATTERN] The CAPI program includes a control so that these questions are only available for children who have previously attended school, or who are currently enrolled in school.

NOTE: For Q.10, we are interested in the age of the child when they first started Grade 1. This is specified because some children may have repeated Grade 1, or enrolled more than once in Grade 1.

Q.12-17 [SKIP PATTERN] The CAPI program includes a control so that these questions are only available for children who are currently enrolled in school.

3.2 HOUSEHOLD HEALTH

This sub-module aims to capture child functioning and disability for all children aged 3 – 17 years who live in the household. We do not just ask whether a child has a disability for several reasons:

- Stigma and shame: families might not wish to disclose this information.
- Identification: people may not identify as having a disability, or they may not have received a formal diagnosis.
- Translation: the word 'disability' is not easily translated in all languages, and could be very negative or limited in the meaning conveyed.

The questions in this sub-module follow the 'social' model of disability, which focus on 'functional difficulties' experienced by individuals. No single response will indicate whether a child has a disability or not.

To avoid stigma, and to reduce confusion across translations, we refer to this sub-module as focusing on health, and not on disability.

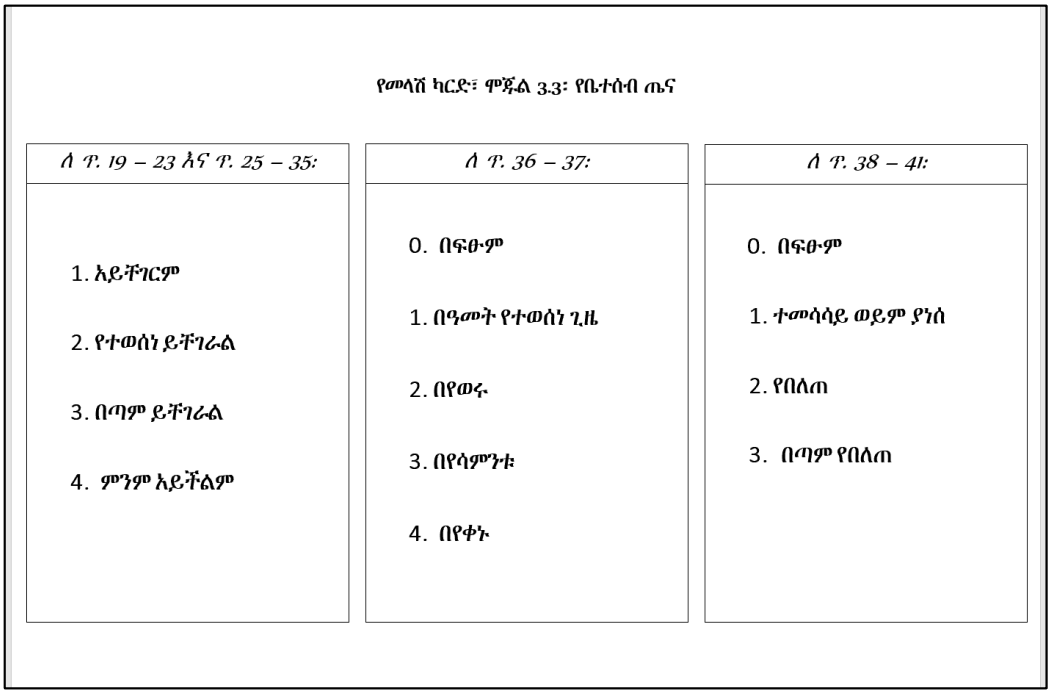

Principles for completing this sub-module:

1. Use the provided respondent card ('Household Health') for Module 3.2 in the relevant language (see Figure 8). Where more than one language is available for a region / zone, you should select the language in which the primary caregiver is most comfortable.
2. For the indicated questions, make sure the respondent can see the card, and point to each answer option as you read them out. This is important, because we do not just want 'yes' or 'no' answers to these questions.
3. Familiarise yourself with the questions (language, skip patterns).
4. Do not change the wording of the questions.
5. Do not change the order of the questions.
6. Do not omit any questions.
7. Do not rush through the questions – allow time for the response.
8. If the respondent is confused, offer clarifications discussed in training (e.g. the difference between 'some difficulty' and 'a lot of difficulty'). Consistency across fieldworkers is very important for data quality.
9. Be sensitive – particularly if you meet someone who has a disability in the household.

Figure 8: Languages for Respondent Cards

Region	Language
Addis Ababa	Amharic
Amhara	Amharic
Benishangul Gumuz	Amharic OR Berta
Oromia	Afan Oromo
SNNP / Hadiya Zone	Amharic OR Hadiya
SNNP / Sidama Zone	Amharic OR Sidama
SNNP / Wolayta Zone	Amharic OR Wolayta
Somali	Somali
Tigray	Tigrigna

Figure 9: Image of Respondent Card 3.2: Household Health (Amharic version)

የመላሽ ካርድ፣ ሞጁል 3.3፣ የቤተሰብ ጤና

ለ ፕ. 19 – 23 እና ፕ. 25 – 35:	ለ ፕ. 36 – 37:	ለ ፕ. 38 – 41:
1. አይችገርም	0. በፍፁም	0. በፍፁም
2. የተወሰነ ይችገራል	1. በዓመት የተወሰነ ጊዜ	1. ተመሳሳይ ወይም ያነሰ
3. በጣም ይችገራል	2. በየወሩ	2. የበለጠ
4. ምንም አይችልም	3. በየሳምንቱ	3. በጣም የበለጠ
	4. በየቀኑ	

Q.18 Ask this question for each child, and record whether each child wears glasses.

Q.19 [SKIP PATTERN] Q.19 is skipped if the child does not wear glasses.

Otherwise, show Respondent Card 3.2 and point to the answer options as you read them out.

Q.20 [SKIP PATTERN] Q.20 is skipped if the child does wear glasses.

Otherwise, show Respondent Card 3.2 and point to the answer options as you read them out.

Q.21 Ask this question for each child, and record whether each child wears a hearing aid.

Q.22 [SKIP PATTERN] Q.22 is skipped if the child does not wear a hearing aid.

Otherwise, show Respondent Card 3.2 and point to the answer options as you read them out.

Q.23 [SKIP PATTERN] Q.23 is skipped if the child does wear a hearing aid.

Otherwise, show Respondent Card 3.2 and point to the answer options as you read them out.

Q.24 Ask this question for each child, and record whether each child uses any equipment or receives any assistance for walking.

Q.25-28 [SKIP PATTERN] Q.25-28 are skipped if the child does not use any equipment or receive any assistance for walking.

Otherwise, ask each question in turn, showing Respondent Card 3.2 and pointing to the answer options as you read them out.

The CAPI program will follow specific skip patterns depending on different responses. For example, if a child who uses equipment or needs assistance has 'a lot of difficulty' walking 100m on level ground or 'cannot do this at all' (Q.25), then it is assumed that the child cannot do the same for 500m on level ground (Q.26). Q.26 is therefore skipped in these cases.

Q.29-30 [SKIP PATTERN] Q.29-30 are skipped if the child does use equipment or receives any assistance for walking.

Otherwise, ask each question in turn, showing Respondent Card 3.2 and pointing to the answer options as you read them out.

NOTE: Emphasise that these questions ask the respondent to compare the child to other children of the same age.

Q.31-35 Ask these questions for each child. For each question, show Respondent Card 3.2 and point to the answer options as you read them out.

NOTE: For Q.34-35, emphasise that these questions ask the respondent to compare the child to other children of the same age.

Q.36-37 Ask these questions for each child. For each question, show Respondent Card 3.2 and point to the answer options as you read them out.

NOTE: These questions ask how often the child seems very anxious, nervous or worried (Q.36) and very sad or depressed (Q.37). This means more anxious or more sad than usual.

Q.38-41 Ask these questions for each child. For each question, show Respondent Card 3.2 and point to the answer options as you read them out.

NOTE: Emphasise that these questions ask the respondent to compare the child to other children of the same age.

MODULE FOUR
PRIMARY CAREGIVER AND HOUSEHOLD HEAD BACKGROUND INFORMATION

This module allows you to collect background information on the primary caregiver and the household head.

Module Four must be completed by the index child's primary caregiver.

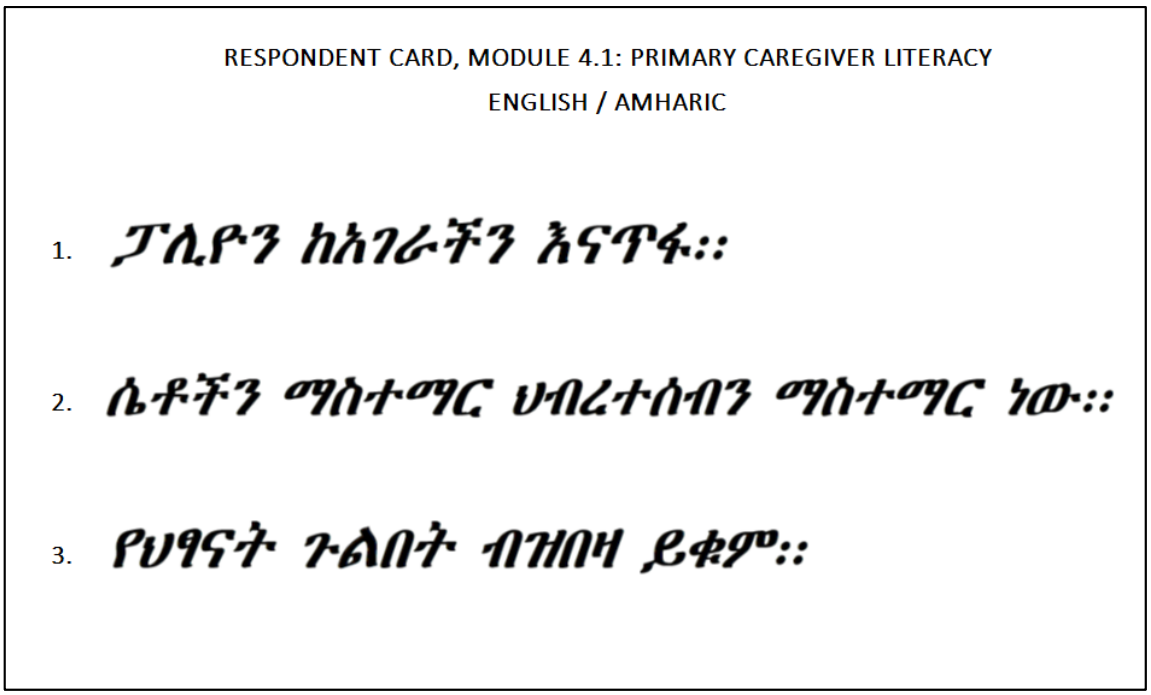

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this. Make sure that it is the correct ID for the index child's primary caregiver.

4.1 Primary Caregiver Literacy

This sub-module allows you to collect information on the primary caregiver's literacy skills. You will use Respondent Card 4.1: Primary Caregiver Literacy in the relevant language to do this (see Figure 8). Where more than one language is available for a region / zone, you should select the language in which the primary caregiver is most comfortable.

Note that all language versions of Respondent Card 4.1 include an English translation on one side, and the local language translation on the other side.

Figure 10: Image of Respondent Card 4.1 (Amharic version)

Q.2 Show the primary caregiver Respondent Card 4.1, and ask him/her to read one of the sentences to you. S/he can choose any one of the sentences.

If the primary caregiver cannot read a whole sentence, ask if s/he can read any part of one of the sentences.

Then record the primary caregiver's ability to read the sentence (01 = Cannot read at all; 02 = Able to read only part of the sentence; 03 = Able to read full sentence). If the primary caregiver requested a

language which was not available on any Respondent Cards, enter '04'.

If the primary caregiver is blind or visually impaired, do not ask them to read the Respondent Card. Instead, enter '05' for Q.2.

Q.3 Enter the language of Respondent Card 4.1 which you used for this sub-module.

4.2 Primary Caregiver Background

This sub-module allows you to collect basic background information on the primary caregiver.

Q.4 Record whether the primary caregiver was born in this kebele.

Q.5 [SKIP PATTERN] Q.5 is skipped if the primary caregiver was born in this kebele.

Otherwise, use the provided codes to record the reason why the primary caregiver came to this kebele.

Q.6 Record the number of completed years that the primary caregiver has lived in this dwelling in this location. For example, if the primary caregiver has lived there for 4.5 years, enter 4 years (4 years have been completed in that dwelling).

Q.7 An 'official position' may refer to a paid or unpaid position with responsibilities in a kebele or woreda office.

Q.8-10 Record the primary caregiver's religion, first language, and whether s/he can have a conversation in any other languages.

NOTE: Being able to have a conversation means both speaking and listening in another language.

Q.11 [SKIP PATTERN] Q.11 is skipped if the primary caregiver says that s/he cannot have a conversation in any other languages.

Otherwise, record whether the primary caregiver can have a conversation in each listed language.

4.3 Household Head Background

This sub-module allows you to collect background information on the household head. If the household head is present, s/he may answer these questions directly. Otherwise, the primary caregiver may answer these questions on behalf of the household head.

Q.12 Allows you to skip this sub-module if the primary caregiver and household head are the same person.

Q.13 Record whether the household head was born in this kebele.

Q.14 [SKIP PATTERN] Q.5 is skipped if the household head was born in this kebele.

Otherwise, use the provided codes to record the reason why the household head came to this kebele.

Q.15 Record the number of completed years that the household head has lived in this dwelling in this location. For example, if the household head has lived there for 4.5 years, enter 4 years (4 years have been completed in that dwelling).

Q.16 An 'official position' may refer to a paid or unpaid position with responsibilities in a kebele or woreda office.

Q.17-19 Record the household head's religion, first language, and whether s/he can have a conversation in any other languages.

NOTE: Being able to have a conversation means both speaking and listening in another language.

Q.20 [SKIP PATTERN] Q.11 is skipped if the household head says that s/he cannot have a conversation in any other languages.

Otherwise, record whether the household head can have a conversation in each listed language.

MODULE FIVE
INDEX CHILD BACKGROUND INFORMATION

This module allows you to collect background information on the index child.

Module Five must be completed by the index child's primary caregiver.

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this. Make sure that it is the correct ID for the index child's primary caregiver.

5.1 Index Child Background

This sub-module allows you to record background information about the index child.

Q.2 Ask the primary caregiver how many completed years the index child has lived in this kebele. For example, if the index child has lived there for 4.5 years, enter 4 years (4 years have been completed in that kebele). If the index child has lived in this kebele since birth, make sure the number of years you enter is consistent with the index child's age as entered in the household roster.

Q.3-4 Ask the primary caregiver about the index child's first language, and whether s/he can have a conversation in any other languages.

Q.5 [SKIP PATTERN] Q.5 is skipped if the index child cannot have a conversation in any other languages.

Otherwise, ask the primary caregiver whether the index child can have a conversation in each listed language.

Q.6 Ask the primary caregiver to indicate the exact date of birth for the index child, as best they can remember. Record the day, month and year using the Ethiopian calendar. If the primary caregiver cannot remember the day or month or year, enter '-77' in the relevant field.

Q.7 [SKIP PATTERN] Q.7 will be skipped if the primary caregiver cannot remember any details about the index child's date of birth (day, month and year).

Otherwise, ask the primary caregiver what their source of information is for the index child's date of birth. The codes for Q.7 list potential sources of information from the most reliable ('birth certificate', code 01) to the least reliable ('recollection by other persons', code 07). If the household has more than one source of information (e.g. 'primary caregiver's recollection' and 'birth certificate'), enter the most reliable source of information available (i.e. the lowest code value).

Note on difference between codes: 'home record' (code 04) refers to an informal written record at home. 'Primary caregiver's recollection' (code 06) or 'recollection by other persons' (code 07) should only be selected if there is no written record of the child's date of birth at home.

5.2 Index Child's Schooling

This sub-module allows you to record information about the index child's experiences of schooling.

Q.8 This question asks whether the index child has received any textbooks from his/her school. This can be any time, either this academic year or earlier.

Q.9 [SKIP PATTERN] Q.9 is skipped if the index child has not received any textbooks from his/her school.

Otherwise, this question asks whether the index child uses the textbooks provided by his/her school. We ask this question because the index child may not use textbooks even if they are provided – for example, the textbooks may be left unused at school or at home.

Q.10 [SKIP PATTERN] Q.10 is skipped if the index child does not receive textbooks from his/her school, and/or if the index child does not use provided textbooks.

Otherwise, ask the primary caregiver where the index child uses his/her textbooks. Read out each listed answer option and ask the primary caregiver to select one option.

Q.11-17 These questions relate to household expenditure on the index child's education last academic year (2010 E.C.). Enter the amount in Ethiopian Birr. Note that for each question, we are interested specifically on the amount of money spent on the index child.

If the household did not spend any money on a listed item, enter '00'.

5.3 Nutrition and Health

This sub-module allows you to record information about the index child's nutrition and health

Q.18-19 These questions relate to any meals that the index child receives at his/her school.

[SKIP PATTERN] Q.19 is skipped if the index child does not receive a meal at his/her school.

Otherwise, ask the primary caregiver how long the index child has been receiving a meal at the school. Read out each listed answer option and ask the primary caregiver to select one option.

Q.20 This question refers to the index child's general health. Read out each listed answer option, and ask the primary caregiver to select one option.

Q.21-32 We are interested in the number of days that the index child ate each listed type of food in the last seven days. Make sure that you explain to the primary caregiver that this is the time period we are interested in.

For each listed food type, read out the provided examples so that the primary caregiver fully understands the question – e.g. for Q.22, say: 'In the last 7 days, on how many days did [index child] eat other foods made with grains, such as rice, porridge, bread, biscuits or macaroni?'. You then enter the number of days (between 00 and 07) stated by the primary caregiver.

5.4 Time Use

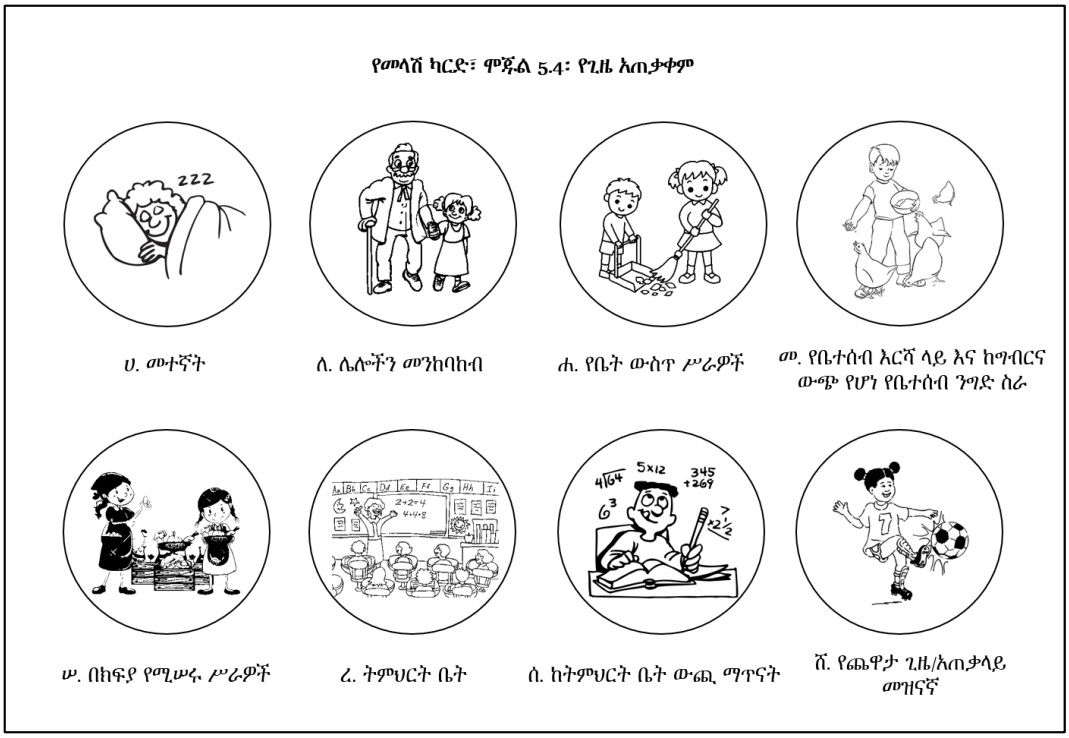

This sub-module allows you to record information about how the index child spends their time on a typical day. You will use Respondent Card 5.4: Time Use in the relevant language to do this (see Figure 8). Where more than one language is available for a region / zone, you should select the language in which the primary caregiver is most comfortable. You will also need 24 beans to complete this module.

Show Respondent Card 5.4 to the primary caregiver, and explain what each activity means. Remember that items d, e and f include travelling times to and from a place of work / to and from school.

Now give the respondent the 24 beans, and explain that these represent 24 hours of a typical day (from Monday to Friday, excluding holidays, festivals, etc.). Ask the respondent to distribute the 24 beans according to the time spent in each task, starting with sleeping time and then with the activities on which the index child spends most of his/her time. Make sure all 24 beans are allotted.

Then ask the respondent to confirm if they represent index child's typical day and allow him/her to reallocate the beans if needed. You should then enter the number of hours for each activity (represented by the number of beans in each circle on the Respondent Card) via CAPI. If the index child spends no time on a specific activity, enter '00'.

Figure 11: Image of Respondent Card 5.4: Time Use (Amharic version)

MODULE SIX
HOUSEHOLD INVOLVEMENT IN INDEX CHILD'S EDUCATION

This module allows you to collect background information on the extent to which household members, including the primary caregiver, are involved in the index child's education.

Module Six must be completed by the index child's primary caregiver.

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this. Make sure that it is the correct ID for the index child's primary caregiver.

6.1 Involvement with Schooling

This sub-module allows you to record information on the involvement of household members (including the primary caregiver) in the index child's schooling.

Q.2 Ask the primary caregiver which household member is primarily responsible for making decisions about the index child's education. Then enter the ID of this household member from the household roster.

Q.3 This question refers to the current involvement of any household members in school committees such as the Parent Teacher Student Association (PTSA), the School Improvement Committee (SIC) or another committee at the index child's school.

Q.4 This question asks whether any household members are blood relatives of a member of school committees such as the PTSA, the SIC or another committee at the index child's school.

Q.5 This question asks whether a school committee meeting (including PTSA, SIC or other committees) has taken place at the index child's school this academic year (2011 E.C.)

Q.6 [SKIP PATTERN] Q.6 is skipped if no committee meetings have taken place in this academic year, or if the primary caregiver is unaware of any committee meetings.

Otherwise, ask the primary caregiver if they attended the meeting(s) referred to in Q.5.

Q.7-9 These questions refer to different kinds of information which may be displayed in the index child's school. Note we are interested in whether the primary caregiver has seen these documents because they are posted in a public place in the school – i.e., where they can be easily viewed by all parents, teachers and students. If the primary caregiver has seen any of these documents because s/he is a member of a school committee, or s/he has been shown these documents in a school office, then you should enter '00' (= No).

Q.7: The school budget is a document which indicates how funds are being spent in the school year. Note that we are specifically interested in the school budget for 2010 E.C. or2011 E.C.

Q.8: The School Improvement Plan (SIP) is the plan prepared by the PTSA (Parent Teacher Student Association) to strengthen learning outcomes at the school. The implementation of School Improvement Plan activities is funded by the school grant. Note that we are specifically interested in the School Improvement Plan for 2010 E.C. or 2011 E.C.

Q.9: The School Report Card presents EMIS (Education Management Information Systems) information about the school, compared to other schools in the woreda. Note that we are

specifically interested in the School Report Card for 2010 E.C. or 2011 E.C.

Q.10-11 [SKIP PATTERN] Q.10 and 11 will only be displayed if the child was enrolled in school last year (i.e., Grade 1 students who were in O Class, and Grade 4 students).

Otherwise:

Q.10: Ask the primary caregiver whether s/he or any other household members participated in each of the listed school-related activities at the index child's school in 2010 E.C. Note that if the index child was enrolled in a different school last year, the respondent should answer with reference to that school.

Q.11: Ask the primary caregiver how often s/he or any other household members participated in each of the listed activities at the index child's school. After reading out each listed activity, read out all answer options and ask the primary caregiver to select one option. Note that if the index child was enrolled in a different school last year, the respondent should answer with reference to that school.

Note: 'never or hardly ever' means less than once per year.

Q.12-13 For these questions, we are interested in whether the primary caregiver knows the name of the index child's homeroom teacher and principal. If the primary caregiver only knows the first name of the teacher or principal, it can still be entered.

However, if the primary caregiver has to ask the household head, the index child or any other household members for the name of the homeroom teacher and/or the name of the principal, this indicates that s/he does not know the name(s) herself. In these cases, you should therefore enter '77' (= Not Known) for Q.12 and/or Q.13.

6.2 Support for Learning

Q.14 [SKIP PATTERN] Q.14 will only be displayed if the child was enrolled in school last year (i.e., Grade 1 students who were in O Class, and Grade 4 students).

This question asks how often the primary caregiver or any other household member engaged in the listed activities with the index child last academic year. After reading out each listed activity, read out all answer options and ask the primary caregiver to select one option.

Note: 'never or hardly ever' means less than once per year.

MODULE SEVEN
PRIMARY CAREGIVER'S ATTITUDES AND PERCEPTIONS

This module allows you to collect information on the primary caregiver's attitudes and perceptions relating to education.

Module Seven must be completed by the index child's primary caregiver.

Start by entering the ID of the respondent for the module (Q.1), consulting the paper version of the household roster to confirm this. Make sure that it is the correct ID for the index child's primary caregiver.

7.1 School Choice

This sub-module allows you to record information about the household's decisions relating to school choice for the index child.

Q.2 This question acts as a filter – if there is only one primary school which is easily accessible from the household, then there is no 'school choice' to be made.

'Easily accessible' means a school which can be reached in a convenient amount of time and without significant difficulty, using the household's primary means of transport (including on foot, if this is the way the index child travels to school).

Q.3 [SKIP PATTERN] This question is skipped if there is only one primary school which is easily accessible from the household.

Otherwise, ask the primary caregiver how important each of the listed reasons was when choosing the index child's primary school. After each reason, read out each of the listed answer options and ask the primary caregiver to select one option.

7.2 Attitudes towards education

This sub-module includes a series of questions to help us understand the primary caregiver's attitudes towards education. Before starting this sub-module, explain that you just interested in the primary caregiver's opinions for each of the questions – there are no right or wrong answers.

For Q.5, you will use Respondent Card 7.2: Attitudes towards Education in the relevant language to do this (see Figure 8). Where more than one language is available for a region / zone, you should select the language in which the primary caregiver is most comfortable.

Q.4 Ask the primary caregiver if s/he is satisfied with the quality of education offered by the index child's school. Read out each listed answer option, and ask the primary caregiver to select one option.

Q.5 Tell the primary caregiver that you are going to read out a series of statements about primary education in the local area, and in each case you would like him/her to indicate whether s/he strongly disagrees, disagrees, agrees or strongly agrees with each statement.

After reading out each statement, show the primary caregiver Respondent Card 7.2 and point to each answer option as you read it out. Then ask the primary caregiver to give their answer.

In case the primary caregiver does not know enough about a certain topic to give an answer, you should enter '77' (= 'I don't know about this').

Figure 12: Image of Respondent Card 7.2: Attitudes towards Education (Amharic version)

Q.6 This question asks what the primary caregiver thinks is the most important reason for children in their community to receive an education. Read out each of the listed answer options, and ask the primary caregiver to select one option. Make sure you read out each option slowly and clearly, and repeat any options if requested by the primary caregiver.

Q.7 This question asks whether the primary caregiver thinks it is more or less important for girls in their community to receive an education compared to boys. Read out each of the listed answer options, and ask the primary caregiver to select one option.

Q.8 This question asks what the primary caregiver thinks is the most important reason for children with disabilities in their community to receive an education. Read out each of the listed answer options, and ask the primary caregiver to select one option. Make sure you read out each option slowly and clearly, and repeat any options if requested by the primary caregiver.

7.3 Aspirations and expectations

This sub-module allows you to ask the primary caregiver about their aspirations and expectations for the index child's future.

Q.9 Ask the primary caregiver what level of formal education they would like the index child to complete.

Q.10 Ask the primary caregiver what job they would like the index child to do in future. You should match their answer as closely as possible to one of the codes offered for this question. If you are unsure whether the answer given by the primary caregiver matches one of the available codes, you should ask the primary caregiver to offer a brief explanation of the job they have mentioned. If there is still no match in the provided codes, enter '60' (= Other).

4. Finishing the questionnaire

4.1 Once you have completed the questionnaire, thank the primary caregiver and household head for their time and participation. The CAPI program will inform you if any questions or sub-modules are incomplete; you should go back and complete these before you leave. Make sure you save the completed case.

4.2 Before you leave, ask the primary caregiver and household head if they (or any other household members) have any questions for you. It is important to allow time for this, since the household has been generous in participating and answering our questions!

4.3 The Household Survey Supervisor is responsible for ensuring that household questionnaire data backed up on the same day it has been collected, and that all data are uploaded and sent to EDRI at least once per week. In areas where internet connection is more easily available, data should be uploaded and sent to EDRI more frequently.

5. Households with more than one index child

5.1 In some households, it is possible that there will be more than one index child – for example, one sibling who has been included in the RISE School Survey in Grade 1 and an older sibling who has been selected in Grade 4. Alternatively, siblings in the same class or in different schools may have been included in the RISE School Survey.

5.2 At the beginning of the CAPI program, after entering the index child's name, name of their school, grade, school ID, class ID and student ID, you will be asked whether there is another index child who lives at the household.

5.3 In most cases, the answer will be no. However, if there is another index child in the household, the CAPI program will allow you to enter the second index child's name, name of their school, grade, school ID, class ID and student ID before proceeding.

5.4 You should complete the rest of the questionnaire in the same way as described in this manual for one index child. The only differences will be as follows:

Module 1.1, Household Roster: Enter the name of one index child in the first row and the name of the second index child in the second row. The CAPI program will generate IDs 01a and 01b for the index children.

Module 5.1, Index Child Background Information: Complete this module with reference to the first index child. Then, the CAPI program will allow you to complete the same module again with reference to the second index child.

6. Fieldworker conduct

6.1 There are a number of basic principles that all fieldworkers and supervisors must follow throughout the survey:

1. Provide sufficient information to participants so that they understand why you are conducting a survey in their household.
2. Make sure participants have a chance to offer their informed consent or to decline participation.
3. Be polite, and treat all participants with respect.
4. Arrive at the stated time and never keep participants waiting.
5. Avoid 'leading' participants to any particular answer. You should, however, clarify the meaning of any questions if required using the information in this manual.
6. Avoid doing any harm to participants.
7. Treat everything that participants tell you as confidential.
8. Never make promises to participants that you cannot keep.
9. Never make up answers or information for the survey.
10. Avoid any inappropriate behaviour during fieldwork, including bribing participants; sexual misconduct; buying or selling goods from participants; lending or borrowing money or goods from participants.

6.2 During fieldworker training, you will be asked to sign a document to indicate that you have understood and agreed to this code of conduct. Supervisors and fieldwork coordinators will also be asked to sign documents indicating that they will both adhere to this code of conduct, and that they are responsible for ensuring that all those involved in the study adhere to the code of conduct.

6.3 During fieldwork, if you observe any deviation from this code of conduct, you must report this to the fieldwork coordinators, who will be based at EDRI in Addis Ababa during fieldwork. Appropriate action will be taken if any fieldworkers or supervisors are found to be engaging in inappropriate behaviour during data collection.

Annex 1: Checklist for household survey

General		
1	Selected students have been identified as 'RISE students' on the Student List based on information provided by the RISE School Supervisor in the region.	
2	Household visits are only planned for these RISE students. These are students who have completed at least one test in the RISE School Survey.	
3	The fieldwork schedule allows each fieldworker to visit 4 households per day.	
4	Where needed, local interpreters have been recruited and informed about the fieldwork schedule.	
Arriving at the household		
5	You have confirmed that this is the household where the index child lives, by checking their full name, gender, grade and name of their school.	
6	The index child's primary caregiver is available for 1-2 hours to complete the questionnaire.	
7	Informed consent for participation in the study has been gained verbally from the primary caregiver and all other questionnaire respondents.	
Completing the questionnaire		
8	A quiet space for questionnaire administration has been identified, so that the respondents have privacy while completing the questionnaire.	
9	The School ID, Class ID and Student ID for the index child has been entered (by referring to the Student List) via CAPI before starting the questionnaire.	
10	You have this Household Survey Fieldworker Manual to hand, so that it can be consulted if any clarifications are required during questionnaire administration.	
11	You have the following materials ready for questionnaire administration: a fully-charged tablet with the loaded Household Questionnaire CAPI program; a paper version of the Household Roster; a set of 4 Respondent Cards in the appropriate language(s); 24 beans (for Module 5.4, Time Use).	
Finishing the questionnaire		
12	After completing the questionnaire, you have thanked the primary caregiver and the household head for their time and participation. Before leaving, you have answered any questions they have for you.	

NOTES

Information for Participants:
Explaining the 2011 E.C. RISE Ethiopia Household Survey

We are visiting your school to invite you to participate in a study of Ethiopian schools. The project is called RISE Ethiopia, and it is examining the quality of primary education in seven Ethiopian regions: Amhara, Benishangul Gumuz, Oromia, SNNPR, Somali, Tigray and Addis Ababa. The project is funded by international organisations, and is being conducted by the Ethiopian Development Research Institute (EDRI, Addis Ababa), Addis Ababa University and the University of Cambridge (UK). Findings from the research project are intended to help government officials and school-level stakeholders in Ethiopia and in other countries to improve the quality of primary education.

We plan to collect information from selected households in this woreda. Children from theses households have participated in a linked school survey, and we wish to collect information about their families' socio-economic status and educational background at the household level. We will administer a household questionnaire to the heads of each household and primary caregivers to do this.

The information we collect in this study will be made anonymous. This means that participants' data will not be shared with anyone else in the woreda, and it will not be possible to identify children or other household members from the data we produce.

Your participation in this survey is voluntary – you may choose not to participate, and even if you do agree to participate you may withdraw at any time. If you are happy to participate, your involvement is valuable to the RISE Ethiopia research project, and will help provide important information to improve the quality of education in Ethiopia. We thank you for your time. If you do not want to participate, please inform one of the researchers.
