RISE ETHIOPIA

R1-B SCHOOL SURVEY

FIELDWORKER MANUAL

2011 E.C.

This manual explains how to conduct the fieldwork at the beginning of the school year (R1-B) in the RISE Ethiopia School Survey. Please read it carefully before you begin work, and refer to it often.

If you have any questions that are not covered in this manual, ask your supervisor.

If your team encounters any challenges not explained in this manual, seek advice from EDRI.

1. Information about the survey

RISE Ethiopia: School Survey and Household Survey

1.1 RISE (Research on Improving Systems of Education) is a large-scale research programme that seeks to understand how school systems in low and middle-income countries can deliver better quality education for all. It is being conducted in Ethiopia, India, Indonesia, Pakistan, Tanzania and Vietnam.

RISE Ethiopia is examining the design and implementation of large-scale government education reforms, the General Education Quality Improvement Program (GEQIP). The third phase of the reforms, 'GEQIP E', is being implemented from 2011 to 2015 E.C. RISE Ethiopia aims to understand whether and how these reforms improve learning outcomes for primary school students over this period.

1.2 RISE Ethiopia is starting with a longitudinal **school survey** in 2011 E.C. The survey will include approximately 4,500 Grade 1 students and 4,500 Grade 4 students in 7 regions (Addis Ababa, Amhara, Benishangul-Gumuz, Oromia, SNNP, Somali and Tigray). Data will be collected on students' learning outcomes, and on school, class and teacher characteristics. Two rounds of the school survey will take place in 2011 E.C., at the beginning and end of the school year. Two further rounds of data collection will take place in 2014 E.C., when the RISE Students are in Grades 4 and 7.

1.3 RISE Ethiopia is also conducting a linked **household survey** in 2011 E.C. to collect data on the socio-economic status, family and educational background of the RISE Students. A follow-up household survey will be conducted in 2014 E.C.

The School Survey sample

1.4 The RISE Ethiopia school survey sample includes schools offering the first and second primary cycles (Grades 1 – 8) in the seven regions listed above. The number of schools in each region are approximately proportionate to the population in each region, and include (a) schools from the Young Lives School Surveys (2006 E.C, 2009 E.C); (b) schools targeted in the first phase of the GEQIP E reforms and (c) a random selection of additional schools to represent the urban and rural populations in each region.

1.5 In each school, the following students will be selected as the 'RISE Students':

- 28 Grade 1 students (14 girls, 14 boys)
- 28 Grade 4 students (14 girls, 14 boys)

These students will be randomly selected from up to two Grade 1 classes and two Grade 4 classes in each school. These classes have been selected during a pre-survey tracking exercise.

As explained in this manual:

- The Grade 1 test will only be administered to RISE Students in Grade 1.
- Grade 4 tests will be administered to RISE Students and their peers in Grade 4.

Sampled schools and satellite sites

1.6 It is possible that some of the classes selected during the tracking exercise are located at satellite sites. These are smaller school sites or classrooms, but which have the same principal as a main (larger) school. If any Grade 1 or Grade 4 classes which have been selected for the survey are located at satellite sites, this will be indicated on the Class Roster for the school. Fieldwork supervisors will need to allow enough time when planning the fieldwork schedule for travel and data collection at these satellite sites.

Instruments to be used at each school

1.7 At each school, the following instruments will be used to collect data. Detailed notes on the completion of each instrument are provided in Sections 3 – 7.

1. Roster Booklet 1: School Roster, Teacher Roster and Class Roster
2. Roster Booklet 2: Grade 1 Student Roster
3. Roster Booklet 3: Grade 4 Student Roster
4. Roster Booklet 4: Grade 4 Student Roster – Extra Sheets
5. Principal Questionnaire
6. School Facilities Observation
7. Grade 1 Student Test
8. Grade 4 Student Maths Test
9. Grade 4 Student Language Test

1.8 Fieldwork teams will be provided with sufficient copies of instruments based on enrolment data for selected classes. Instruments will be provided in the languages shown in Figure 1. By providing instruments in these languages, students are required to complete tests in the main language of instruction of that subject in their region/school in Grade 1 and Grade 4. The Principal Questionnaire and School Facilities Observation are provided in English and Amharic.

Figure 1: Instrument language by region

Instrument		Region						
		Addis	Amhara	Benishangul	Oromia	SNNP	Somali	Tigray
1-4	Roster Booklets 1-4	English	English	English	English	English	English	English
5	Principal Questionnaire	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic
6	School Facilities Observation	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic	English Amharic
7	Grade 1 Test	Amharic	Amharic	Berta Amharic	Af Oromo	Sidama Hadiya Wolayta Amharic	Somali	Tigrigna
8	Grade 4 Maths Test	Amharic	Amharic	Berta Amharic	Af Oromo	Sidama Hadiya Wolayta Amharic	Somali	Tigrigna
9	Grade 4 Language Test	Amharic	Amharic	Berta Amharic	Af Oromo	Sidama Hadiya Wolayta Amharic	Somali	Tigrigna

1.9 Figure 2 gives an overview of the number of instruments required at each school. Note that the number of Grade 4 Maths and Language Tests will vary between schools based on student enrolment in the pre-selected classes; EDRI will provide you with details on student enrolment for each of these classes at the start of fieldwork. Fieldwork teams must make sure that they have enough instruments before visiting a school.

Figure 2: Instruments required at each school

Instrument		Copies	Notes
1	Roster Booklet 1	1 per school	-
2	Roster Booklet 2	1 per Grade 1 class	There will usually be two Grade 1 classes selected for the survey in each school, so teams will be given 2 copies of Roster Booklet 2. However, some schools may only have one Grade 1 class. In these cases, teams will be given 1 copy of Roster Booklet 2.
3	Roster Booklet 3	1 per Grade 4 class	There will usually be two Grade 4 classes selected for the survey in each school, so teams will be given 2 copies of Roster Booklet 3 However, some schools may only have one Grade 4 class. In these cases, teams will be given 1 copy of Roster Booklet 3.
4	Roster Booklet 4	1 per team	-
5	Principal Questionnaire	1 per school	To be completed via CAPI
6	School Facilities Observation	1 per school	To be completed via CAPI
7a	Grade 1 Test: Enumerator Booklet	1 per fieldworker	Fieldworkers will use one laminated copy of the Grade 1 Test Enumerator Booklet for all Grade 1 students.
7b	Grade 1 Test: Stimulus Materials	1 per fieldworker	Fieldworkers will use one laminated copy of the Grade 1 Test Stimulus Materials for all Grade 1 students.
7c	Grade 1 Test: Answer Sheet	1 per selected Grade 1 student	The Grade 1 test will be administered to 28 selected Grade 1 students (14 girls, 14 boys) in each school.
8	Grade 4 Maths Test	1 per enrolled Grade 4 student	The Grade 4 test will be administered to all students in selected Grade 4 classes.
9	Grade 4 Language Test	1 per enrolled Grade 4 student	The Grade 4 test will be administered to all students in selected Grade 4 classes.

2. Conducting the survey

Preparing to visit survey schools

2.1 Each supervisor will have a list of woredas and schools that their team will visit during the fieldwork period. This list provides basic information about the school, including contact details, number of selected classes, identified language(s) of instruction and enrolment figures. The fieldwork team will decide the order for school visits based on this information and their local knowledge

2.2 Once the team has decided the schedule for school visits, the supervisor should contact each school principal to introduce the School Survey. The information in Figure 3 (repeated on the back page of this manual) can be used for reference on this call.

Figure 3: Background information to introduce the school survey, and for informed consent of all participants

We are visiting your school to invite you to participate in a study of Ethiopian schools. The project is called RISE Ethiopia, and it is examining the quality of primary education in seven Ethiopian regions: Amhara, Benishangul Gumuz, Oromia, SNNPR, Somali, Tigray and Addis Ababa. The project is funded by international organisations, and is being conducted by the Ethiopian Development Research Institute (EDRI, Addis Ababa), Addis Ababa University and the University of Cambridge (UK). Findings from the research project are intended to help government officials and school-level stakeholders in Ethiopia and in other countries to improve the quality of primary education.

If you agree to take part in this study, we plan to collect information from randomly selected Grade 1 and Grade 4 students at your school. Each Grade 1 student will be asked to complete one test, and each Grade 4 student will be asked to complete two tests (a Maths test and a Language test). Each test will take 1 – 2 periods to complete.

We also plan to collect background information on the school from the principal, as well as information about the school infrastructure and available resources. At the end of the school year, we will return to your school to collect further information that will help us to understand changes over one academic year.

The information we collect in this study will be made anonymous. This means it will not be possible to identify students, teachers, principals or schools from the data we produce. Additionally, students' test results will not be shared with teachers, students or anyone else at the school.

Your participation in this survey is voluntary – you may choose not to participate, and even if you do agree to participate you may withdraw at any time. If you are happy to participate, your involvement is valuable to the RISE Ethiopia research project, and will help provide important information to improve the quality of education in Ethiopia. If you do not want to participate, please inform one of the researchers. Thank you for your time.

2.3 During this call, it will also be important to check that the information that you have about the school is still reliable. At a minimum this will include: (a) checking the student enrolment figures for selected Grade 4 classes and (b) the identified language(s) of instruction for selected Grade 1 and Grade 4 classes. It is also important to check the shifts of the selected Grade 1 and Grade 4 classes (i.e. morning/afternoon), and whether there are any unforeseen events (such as local holidays, government meetings) that might conflict with your plan. Each team should use this information to

adjust or confirm their overall plan. Should any information raise a problem which the team cannot solve, contact EDRI.

2.4 Supervisors should contact principals again a few days before visiting the school, to remind them that you are visiting soon, and to confirm your arrival day and time. You should also use this call to inform the principal that you will need the attendance registers for selected Grade 1 and Grade 4 classes, and ask for these to be kept ready. You will spend up to 2 days in each school.

Informed consent

2.5 All survey participants should have the survey explained to them in a language they can understand. They can choose not to participate if they wish. Principals should be informed as soon as teams arrive at a school, and students should be informed before they begin their first test. Make sure that you allow enough time to make this explanation and to answer any questions that participants might have. The statement in Figure 3 can be read to all respondents to provide them with consistent information about the research project. However, note that more child-friendly information is available for Grade 1 students (see Paragraph 4.12).

2.6 If an individual decides that they do not want to participate, it is important to record this on questionnaire cover pages. These steps are explained in Sections 3 – 6 of this manual.

Compensation for participants

2.7 Note that all participants at the school will receive compensation for participating in the survey. Grade 1 students will be given a pencil before starting the Grade 1 test, and Grade 4 students will be given a pen before they start the Grade 4 Maths test. The principal will receive compensation after completing the Principal Questionnaire, and EDRI will provide you with more information on this during the fieldworker training.

2.8 You should explain the compensation process to the principal when you arrive at the school. In particular, it is important to inform the principal that teachers who are asked to help arrange the fieldwork schedule, to provide class registers and/or to arrange classrooms for tests will not receive compensation. However, you may also explain that any teachers who complete questionnaires at the end of the school year will receive compensation for their time.

Arriving at the school

2.9 On arrival at the school, introduce yourself to the principal, or the vice principal if the principal is absent. Begin by giving the introduction letter from EDRI to this individual. You should also verbally introduce the School Survey and gain the principal / vice principal's informed consent. Use the wording in Figure 3 to guide this introduction and consent.

2.10 If the principal / vice principal gives consent for fieldwork to continue, then you can work with them to develop a schedule to administer all the instruments. Explain the following:

- You will complete rosters of basic school information, of Grade 1 and Grade 4 teachers, and of selected Grade 1 and Grade 4 classes. For this, you will need Attendance Sheets for selected classes. You will need to work with the principal and teachers to do this. It may not

be possible for you to obtain Attendance Sheets instantly as these are sometimes held by individual teachers, at times away from the school site. You should make a request for Attendance Sheets as soon as possible and plan the fieldwork schedule around anticipated delays.

Provide the following overview of the remaining instruments to be completed during your visit:

- The principal will be asked to complete a questionnaire, via fieldworker interview (45 minutes).
- 28 Grade 1 students will complete a test (1 – 2 periods per student).
- All Grade 4 students in 1-2 selected classes will complete a Maths test (2 periods) and a Language test (2 periods).
- A fieldworker will record information on school facilities, and may need to work with staff with this.
- Any selected Grade 1 or Grade 4 classes located at satellite sites will be included, and fieldworkers will visit these sites.

2.11 Next, confirm that the information you have about the school is correct. This will include a check of:

- The identified language(s) of instruction for the selected Grade 1 and Grade 4 classes (make sure you have the correct translations of the instruments).
- Student enrolment in the pre-selected Grade 4 classes (make sure you have enough instruments).
- When periods start and end, and when breaks take place.
- Whether there are any uncommon events (such as local holidays or government meetings) that might impact your visit.
- Any other information you think necessary before beginning your fieldwork.

Arranging the fieldwork schedule

2.12 In each school, you should prepare a fieldwork schedule, so that all team members can use their time efficiently. It is estimated that 2 days will be required for data collection at each school. It is up to the team to organise the fieldwork schedule, but the principles shown in

Figure 4 should be followed. A checklist is provided in Annex 1 for your reference. In all schools, the first instrument to be completed is Roster Booklet 1, then Roster Booklet 2, and then Roster Booklet 3. Once fieldwork teams have prepared a fieldwork schedule for the school, it should be checked with the school principal, to ensure that s/he is happy with the proposed use of time.

2.13 In many schools, Grades 1 and 4 may be taught in shifts – i.e., only in the morning or only in the afternoon. When arranging the fieldwork schedule, make sure you are aware when the selected Grade 1 and Grade 4 classes are taught, and arrange to conduct the Grade 1 and Grade 4 tests when they are present. In shift schools, non-student instruments such as the Principal Questionnaire and School Facilities Observation should be completed when students in the selected classes are not present.

Figure 4: Principles for fieldwork schedule

General	
1	There is no rush to collect data: teams are large and plenty of time has been allowed.
2	Minimise disruption at the school site by planning with the school timetable in mind.
3	Plan based on the shifts Grade 1 and Grade 4 are attending while you are at each school.
4	Arrange all activities to fit within periods, not overlapping breaks.
Rosters	
5	Roster Booklet 1 is the first instrument you will complete.
6	Roster Booklets 2, 3, and (if needed) 4 are the second, third and fourth instruments you will complete.
Grade 1 Student tests	
7	Test answer sheets will be prepared in advance.
8	Only pre-selected Grade 1 students (28 in total) from pre-selected Grade 1 classes will complete tests.
9	Grade 1 tests will be conducted in a quiet area / empty classroom where children will not be disturbed.
Grade 4 tests	
10	Test cover sheets will be prepared in advance.
11	All Grade 4 students in pre-selected Grade 4 classes will complete tests.
12	Grade 4 students will first complete a Maths test (2 periods).
13	Grade 4 students will also complete a Language test (2 periods).
14	Students will only complete 1 test per day, so they do not get too tired.
Principal Questionnaire and School Facilities Observation	
13	The Principal Questionnaire is to be completed via fieldworker interview.
14	A fieldworker will complete the School Facilities Observation by observing the school's infrastructure and facilities.
Support	
15	A sufficient number of fieldworkers will be assigned to administer the Grade 1 tests.
16	There will always be 1 fieldworker present in each Grade 4 class to support Grade 4 students while they complete tests.
17	Plenty of time will be allowed to check that all instruments are correctly complete while the team is at the school.
18	Plenty of time will be taken to follow up with participants if an instrument is incorrect or incomplete.

3. Completing the rosters

3.1 This section includes guidance required to complete the Rosters. Brief instructions are included in each Roster Booklet, but you should refer regularly to this manual for full guidance during fieldwork.

3.2 All Rosters are formatted with grey and white fields. You must only enter responses in white fields.

3.3 All Rosters are to be completed using the Roman Alphabet. Characters from other languages (e.g. Tigrigna and Amharic) should be converted to Roman characters based on standard conventions.

Roster Booklet 1

3.4 **Roster Booklet 1 contains 3 documents, which should be completed in the order presented in the booklet: School Roster, Teacher Roster, Class Roster.**

School Roster

3.5 You will complete 1 School Roster per school.

3.6 The School Roster is pre-filled with information about each school. Check with the school principal or vice principal that the pre-filled information on the School Roster is correct; if there are any errors, correct these clearly in the relevant field. Consult the school principal to enter the date when the school started this academic year – i.e., the date when lessons started (see Figure 5).

Figure 5: Example of a School Roster

1. SCHOOL ROSTER		RISE SCHOOL ID:	2 0 5 1 7

The School Roster is pre-filled with information collected during the pre-survey tracking exercise. Please check these details with the principal, and amend any information which has been entered incorrectly. Consult the principal to complete Q.10.

1	RISE SCHOOL ID	2 0 5 1 7
2	FULL SCHOOL NAME	SUNSHINE FULL CYCLE PRIMARY
3	KEBELE	WEREILO
4	WOREDA	WEREBABO
5	ZONE/SUB-CITY	DEBUB WOLLO
6	REGION	AMHARA
7	SCHOOL EMIS CODE	0 2 0 4 0 3 0 1 6
8	SCHOOL CONTACT TELEPHONE NUMBER	~~07 86 73 45 46~~ 07 96 74 54 32
9	SCHOOL CONTACT NAME	W/RO MULUEMEBET GETACHEW (DIRECTOR)
10	WHEN DID SCHOOL START THIS ACADEMIC YEAR (2011 E.C.)? Use Ethiopian Calendar. Use the following codes for months: 01 = Meskerem, 02 = Tikimt, 03 = Hidar, 04 = Tahsas, 05 = Tir, 06 = Yekatit, 07 = Megabit, 08 = Miazia, 09 = Ginbot, 10 = Sene, 11 = Hamle, 12 = Nahasse/Pagume	DAY: 2 0 MONTH: 0 1 YEAR: 2 0 1 1

The fieldworker has checked the pre-filled information with the principal. It is all correct, except the school contact telephone number (Q.8), so the fieldworker has clearly written the correct number on the roster. The fieldworker has also entered the date when the school started this academic year (using Ethiopian Calendar) (Q.10).

Teacher Roster

3.7 You will complete 1 Teacher Roster per school. Make sure the pre-filled RISE School ID at the top of the Teacher Roster matches the RISE School ID recorded on the front of Roster Booklet 1 before proceeding.

3.8 The Teacher Roster will give a Teacher ID to each Maths and Language teacher for Grade 1 and Grade 4. Only Maths and Language teachers are to be included in the Teacher Roster. You will need the help of the principal / vice principal to complete the Teacher Roster.

3.9 The first 10 rows of the Teacher Roster allow you to enter the names of all Maths teachers for Grade 1 and Grade 4. Note that their Teacher IDs are 'TM' (M for Maths) followed by two digits.

3.10 The next 10 rows of the Teacher Roster allow you to enter the names of all Language Teachers for Grade 1 and Grade 4. Note that their Teacher IDs are 'TL' (L for Language) followed by two digits.

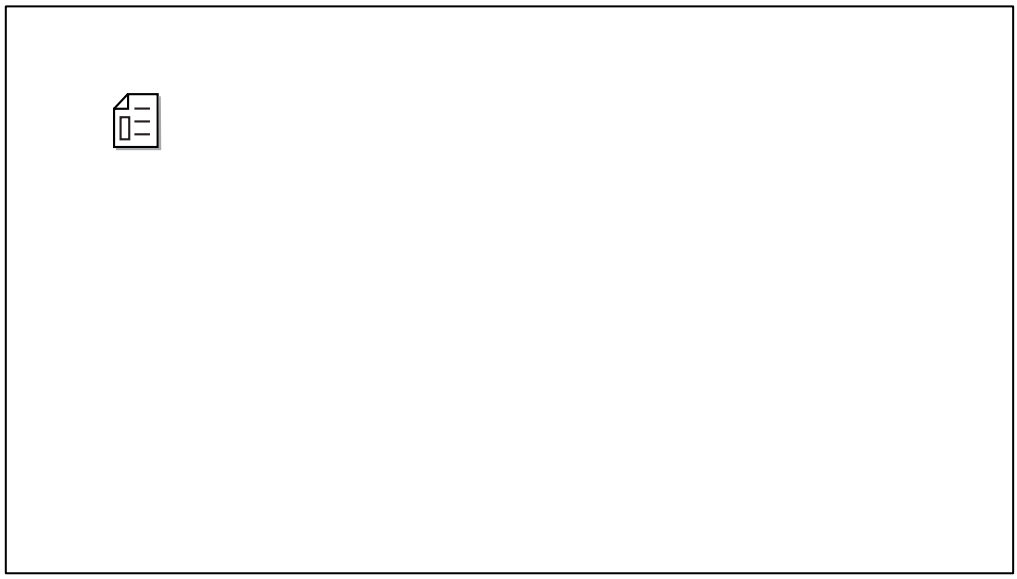

Column 1: Pre-filled with unique IDs for each Maths and Language teacher.

Column 2: Use this column to enter the full name (first name + father's name + grandfather's name) of each Maths teacher and each Language teacher for Grade 1 and Grade 4.

Column 3: Use this column only for Language teachers to indicate which language they teach. This column is pre-filled with '88' (not applicable) codes for Maths teachers.

3.11 Note: if there is a teacher who teaches both Maths and Language to Grade 1 or Grade 4, you will enter his/her name twice on the Teacher Roster: once in the 'Maths Teacher' section, and once in the 'Language Teacher' section. This individual teacher will therefore have two IDs: one Maths Teacher ID, and one Language Teacher ID.

Figure 6: Example of a completed Teacher Roster

At this school, there are three Maths teachers and two Language teachers who teach Grade 1 and/or Grade 4. The fieldworker has entered the full names of the Maths teachers in the rows for TM01, TM02 and TM03, and the full names of the Language teachers in the rows for TL01 and TL02. Ato. Yonas is an English teacher, and W/ro Genet is an Amharic teacher – so the fieldworker enters '14' for Ato. Yonas and '02' for W/ro Genet in Column 3. The fieldworker does not need to complete Column 3 for Maths teachers – it is pre-filled with code '88'.

Class Roster

3.12 You will complete 1 Class Roster per school.

3.13 The Class Roster includes pre-filled information about the Grade 1 classes and Grade 4 classes which have been selected for the survey (see Box 1). For each selected class, the Class Roster allows you to record (a) whether there is shift or full-day teaching (b) the Teacher ID for the Maths teacher and (c) the Teacher ID for the Language teacher.

3.14 The Class Roster has eight columns.

Column 1: Pre-filled with unique Class IDs for each class selected for the survey.

Column 2: Pre-filled with the name of each selected class used in the school (i.e. 1A, 4C).

Column 3: Pre-filled to indicate whether the selected class is in Grade 1 or Grade 4.

Column 4: Pre-filled to indicate whether the selected class is taught at a satellite site.

Column 5: Pre-filled to indicate the main language of instruction for this class.

Column 6: Use this column to indicate whether this class is taught by shift (01) or full-day (02).

Column 7: Use this column to record the Maths Teacher of each class:

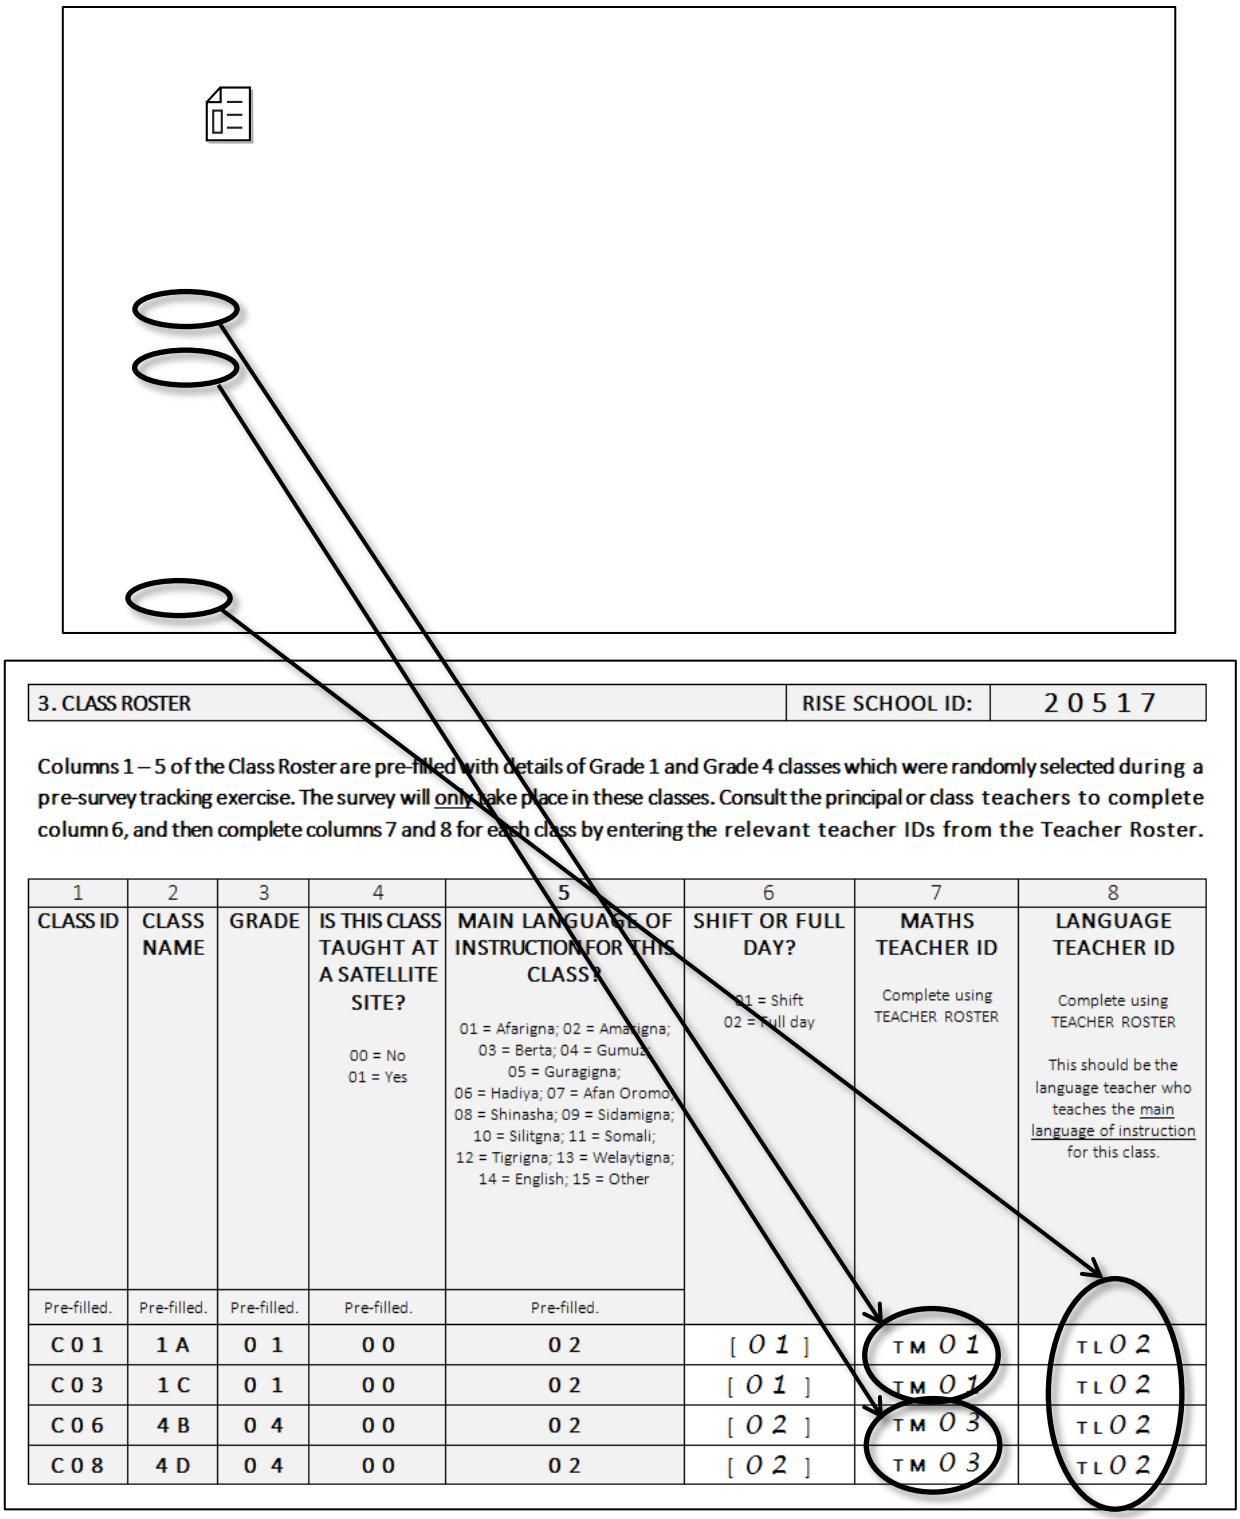

1. Ask the principal to tell you which Maths teacher from the Teacher Roster teaches Maths to the first class listed on the Class Roster.
2. Using the Teacher Roster, find the Teacher ID of that Maths teacher and record it in the row for this class.
3. Repeat this process for each class listed on the Class Roster.

Column 8: Use this column to record the Language teacher of each class:

1. Ask the principal to tell you which Language teacher from the Teacher Roster teaches the main language of instruction to the first class listed on the Class Roster. Note that the main language of instruction for the class is indicated in Column 5 of the Class Roster.
2. Using the Teacher Roster, find the Teacher ID of that Language teacher and record it in the row for this class.
3. Repeat this process for each class listed on the Class Roster.

NOTE: Make sure you only enter the ID of the Language teacher who teaches the main language of instruction to each class. This is the same language in which you will administer the Language Test. See Figure 7 for an example of this.

Figure 7: Completing the Class Roster using the Teacher Roster

3. CLASS ROSTER | **RISE SCHOOL ID:** | **20517**

Columns 1 – 5 of the Class Roster are pre-filled with details of Grade 1 and Grade 4 classes which were randomly selected during a pre-survey tracking exercise. The survey will only take place in these classes. Consult the principal or class teachers to complete column 6, and then complete columns 7 and 8 for each class by entering the relevant teacher IDs from the Teacher Roster.

1	2	3	4	5	6	7	8
CLASS ID	**CLASS NAME**	**GRADE**	**IS THIS CLASS TAUGHT AT A SATELLITE SITE?** 00 = No 01 = Yes	**MAIN LANGUAGE OF INSTRUCTION FOR THIS CLASS?** 01 = Afarigna; 02 = Amarigna; 03 = Berta; 04 = Gumuz; 05 = Guragigna; 06 = Hadiya; 07 = Afan Oromo; 08 = Shinasha; 09 = Sidamigna; 10 = Silitgna; 11 = Somali; 12 = Tigrigna; 13 = Welaytigna; 14 = English; 15 = Other	**SHIFT OR FULL DAY?** 01 = Shift 02 = Full day	**MATHS TEACHER ID** Complete using TEACHER ROSTER	**LANGUAGE TEACHER ID** Complete using TEACHER ROSTER This should be the language teacher who teaches the main language of instruction for this class.
Pre-filled.	Pre-filled.	Pre-filled.	Pre-filled.	Pre-filled.			
C01	1A	01	00	02	[01]	TM 01	TL02
C03	1C	01	00	02	[01]	TM 01	TL02
C06	4B	04	00	02	[02]	TM 03	TL02
C08	4D	04	00	02	[02]	TM 03	TL02

The fieldworker starts by completing Column 6 of the Class Roster – the principal tells the fieldworker that classes 1A and 1C are taught in shifts, and classes 4B and 4D are taught full day, so the fieldworker enters the appropriate codes into Column 6.

The principal then tells the fieldworker that Ato. Getahun is the Maths Teacher for classes 1A and 1C, so the fieldworker enters Ato. Getahun's Teacher ID (TM01) into Column 7 of the Class Roster. W/ro Mekdela is the Maths Teacher for classes 4B and 4D, so the fieldworker enters her Teacher ID (TM03) into Column 7 of the Class Roster. Finally, the principal confirms that Amharic is the main language of instruction in both Grades 1 and 4, and that W/ro Genet teaches Amharic to classes 1A, 1C, 4B and 4D. So the fieldworker enters W/ro Genet's Teacher ID (TL02) for all classes in Column 8.

Note that the Teacher IDs of some teachers on the Teacher Roster have not been entered onto the Class Roster. This is because the Teacher Roster provides a full list of Maths teachers and Language teachers who teach Grade 1 and 4, but the Class Roster only records information for selected Grade 1 and Grade 4 classes (see Box 1).

BOX 1: Pre-selection of Grade 1 and Grade 4 classes

In Meskerem 2011, a pre-survey tracking exercise took place in the 7 regions included in the RISE survey. During this tracking exercise, fieldworkers selected Grade 1 classes and Grade 4 classes for the RISE School Survey.

We ideally wanted two Grade 1 classes and two Grade 4 classes from each school. Below is an example of the process followed during the tracking exercise to select Grade 1 classes:

If the school had one Grade 1 class:	This class was selected for the survey.
If the school had two Grade 1 classes:	Both classes were automatically selected for the survey.
If the school had three or more Grade 1 classes:	The fieldworkers randomly selected two of these classes for the survey.

This is why, in schools with three or more Grade 1 classes, you will find that (a) not all Grade 1 classes are listed on the Class Roster, and (b) the Class IDs shown on the Class Roster are not always consecutive – as shown in Figure 7 where the Class IDs for selected classes are C01, C03, C06 and C08.

The same process was followed to select Grade 4 classes in each school.

Roster Booklet 2

3.15 **Roster Booklet 2 contains the Grade 1 Student Roster.**

Grade 1 Student Roster

3.16 You will complete one Grade 1 Student Roster for each Grade 1 class in the survey. Since there is a maximum of two Grade 1 classes in each school (see Box 1), you will be provided with either one or two Grade 1 Student Rosters in each school. The RISE School ID and Class ID are pre-filled on each copy of the Grade 1 Student Roster for the school. Cross-check the Class Name and Class ID on the Class Roster to make sure you use the correct Grade 1 Student Roster for each class.

3.17 The Grade 1 Student Roster is pre-filled with the names of students who have been randomly selected for the survey (see Box 2). This roster allows you (a) to record information on student absence, (b) to select the Grade 1 students who will complete the Grade 1 test in each class ('RISE Students'), and (c) record the height of selected Grade 1 students after they complete the test.

3.18 To complete the Grade 1 Student Roster for each class, you will need the class attendance register. Since it is close to the start of the school year, many teachers may be keeping only temporary attendance registers. If the formal attendance register is not fully completed, ask the teacher if they have a temporary register, and use this instead.

3.19 Once you have this information, you can complete the Grade 1 Student Roster, which has 4 columns:

Column 1: Pre-filled with unique Student IDs for each student in this class who has been selected for the survey.

Column 2: Pre-filled with the full names of each student in this class who has been selected for the survey.

Column 3: Use this column to record the total number of days that each student has been absent since 21 Meskerem 2011 E.C. (1 October 2018 G.C.). If there is no attendance data available, enter '-88'.

Column 4: Use this column to select 7 girls and 7 boys to complete the Grade 1 test. Complete this column on the first day you administer the Grade 1 tests (explained in Paragraph 4.6).

Column 5 Use this column to record the height of each Grade 1 student who is selected to complete the tests. Complete this column for each student after they have completed the Grade 1 test (explained in Paragraph 4.22). Enter '- 88' for all students who do not complete the Grade 1 test, and '- 99' if a student has severe physical disabilities which mean s/he cannot be measured.

3.20 In most schools, you will need to complete two Grade 1 Student Rosters – i.e., one for each Grade 1 class included in the survey. However, in some schools, there will only be one Grade 1 class – so you will only complete one Grade 1 Student Roster. For these schools, the Grade 1 Student Roster will include pre-filled details for 22 girls and 22 boys.

BOX 2: Pre-selection of Grade 1 and Grade 4 students

In Meskerem 2011, a pre-survey tracking exercise took place in the 7 regions included in the RISE survey. During this tracking exercise, fieldworkers first selected Grade 1 classes and Grade 4 classes (see Box 1), and then selected students from each of these classes for the RISE School Survey.

In total, we want to include **7 girls and 7 boys from each Grade 1 class**, and **7 girls and 7 boys from each Grade 4 class**. However, to avoid attrition between the tracking exercise and the start of the school survey, we selected 'extra' students from each class during the tracking exercise (in case selected students stopped attending school during this time). This is why there are 11 girls and 11 boys with pre-filled information on each Grade 1 Student Roster, and on each Grade 4 Student Roster.

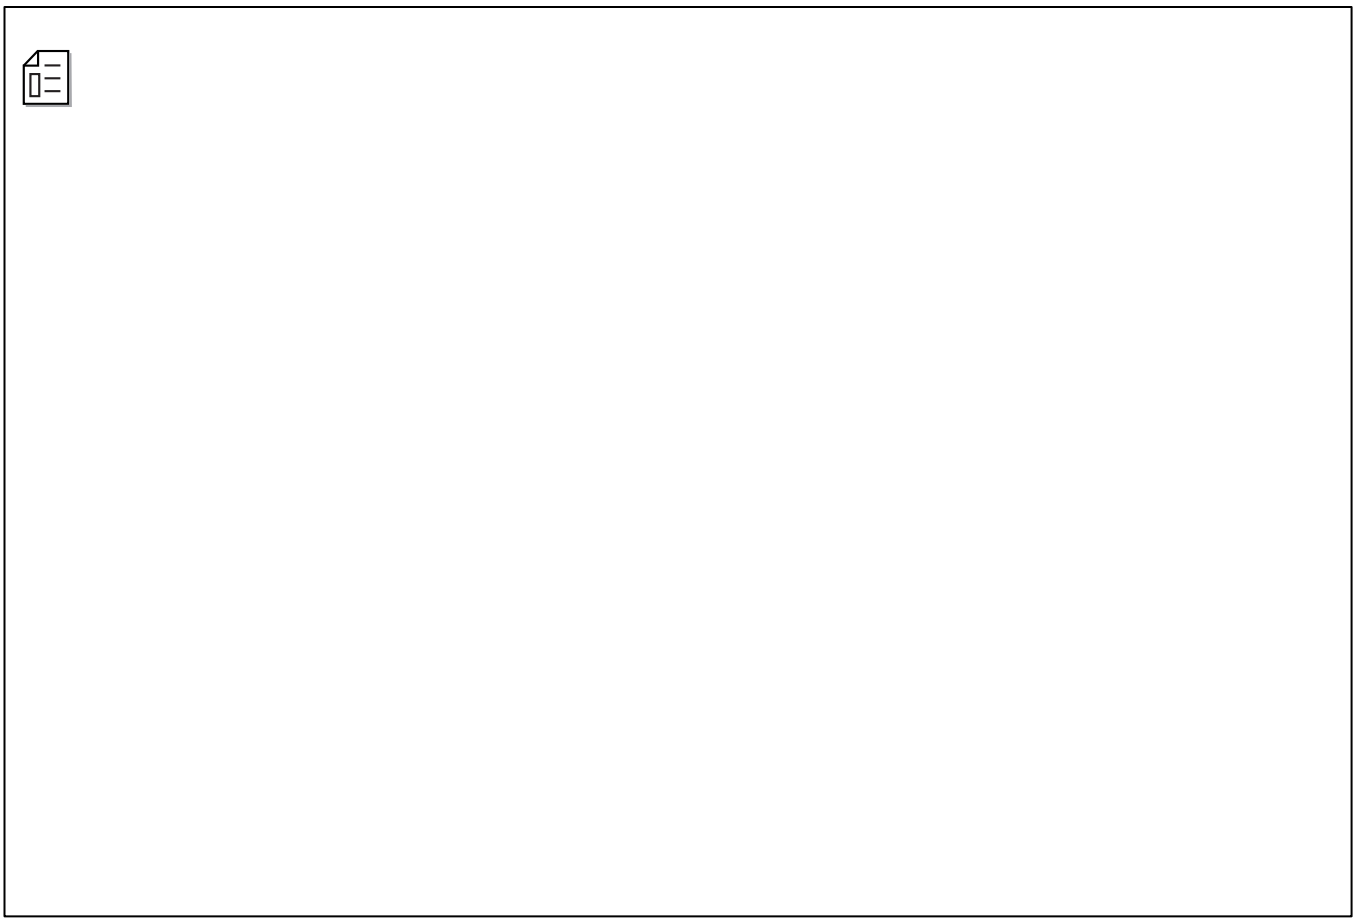

During the school survey, you will use the Student Rosters to select 7 girls and 7 boys from each class who are the '**RISE students**'.

- For Grade 1: you will select the RISE Students before you administer tests – only RISE Students in Grade 1 will complete tests (see Paragraph 4.5).
- For Grade 4: you will select the RISE Students after you administer tests – this is because all Grade 4 students in selected classes will complete tests (see Paragraph 6.3).

Note on schools with one Grade 1 class, and/or one Grade 4 class:

- In schools where there is only one Grade 1 class, the Grade 1 Student Roster will allow you to select 14 girls and 14 boys as 'RISE students' from the class.
- Similarly, in schools where there is only one Grade 4 class, the Grade 4 Student Roster will allow you to select 14 girls and 14 boys as 'RISE students' from the class.

Figure 8: Example of a completed Grade 1 Student Roster

The fieldworker has consulted the class attendance register for this Grade 1 class, and by checking the records for each student listed on the Roster, he has entered the number of days that each student has been absent since 21 Meskerem 2011 E.C. He will complete Column 4 on the first day he administers the Grade 1 tests, and he will complete Column 5 for each student after they complete the Grade 1 test. Note: not all Grade 1 students in this class are listed on the Grade 1 Student Roster (see Box 2).

Roster Booklet 3

3.21 **Roster Booklet 3 contains the Grade 4 Student Roster.**

Grade 4 Student Roster

3.22 You will complete one Grade 4 Student Roster for each Grade 4 class in the survey. Since there is a maximum of two Grade 4 classes in each school (see Box 1), you will complete either one or two Grade 4 Student Rosters in each school. The RISE School ID and Class ID are pre-filled on each copy of the Grade 4 Student Roster for the school. Cross-check the Class Name and Class ID on the Class Roster to make sure you use the correct Grade 4 Student Roster for each class.

3.23 Note that the Grade 4 Student Roster is different from the Grade 1 Student Roster. The Grade 4 Student Roster is pre-filled with the names of students who have been randomly selected for the survey ('RISE Students' – see Box 2), and allows you to enter information about student absence. However, the Grade 4 Student Roster also includes rows where you will enter information about the rest of the students in the class. This is because all Grade 4 students in selected classes will complete the Grade 4 tests: both RISE Students and their peers.

3.24 To complete the Grade 4 Student Roster for each class, you will need the class attendance register. Since it is close to the start of the school year, many teachers may be keeping only temporary attendance registers. If the formal attendance register is not fully completed, ask the teacher if they have a temporary register, and use this instead.

3.25 Once you have this information, you can complete the Grade 4 Student Roster, which has 4 columns.

Column 1: Pre-filled with unique Student IDs for each student in this class who has been selected for the survey.

Column 2: For the first 22 rows (ST01 – ST22), this column is pre-filled with the full names of each student in this class who has been pre-selected for the survey. For the remaining rows (ST23 onwards), this column is empty, so that you can enter the full names of all other students in the class. You should use the class register to do this, being careful not to enter the names of students who are pre-filled in rows ST01 – ST22.

NOTE: Each Grade 4 Student Roster has space for 70 students. If there are more than 70 students enrolled in a class, use as man 'Grade 4 Student Roster Extra Sheets' (Roster Booklet 4) as required (see Paragraph 3.25).

Column 3: Use this column to record the total number of days that the student has been absent since 21 Meskerem 2011 E.C. (1 October 2018 G.C.). If there is no attendance data available, enter '-88'.

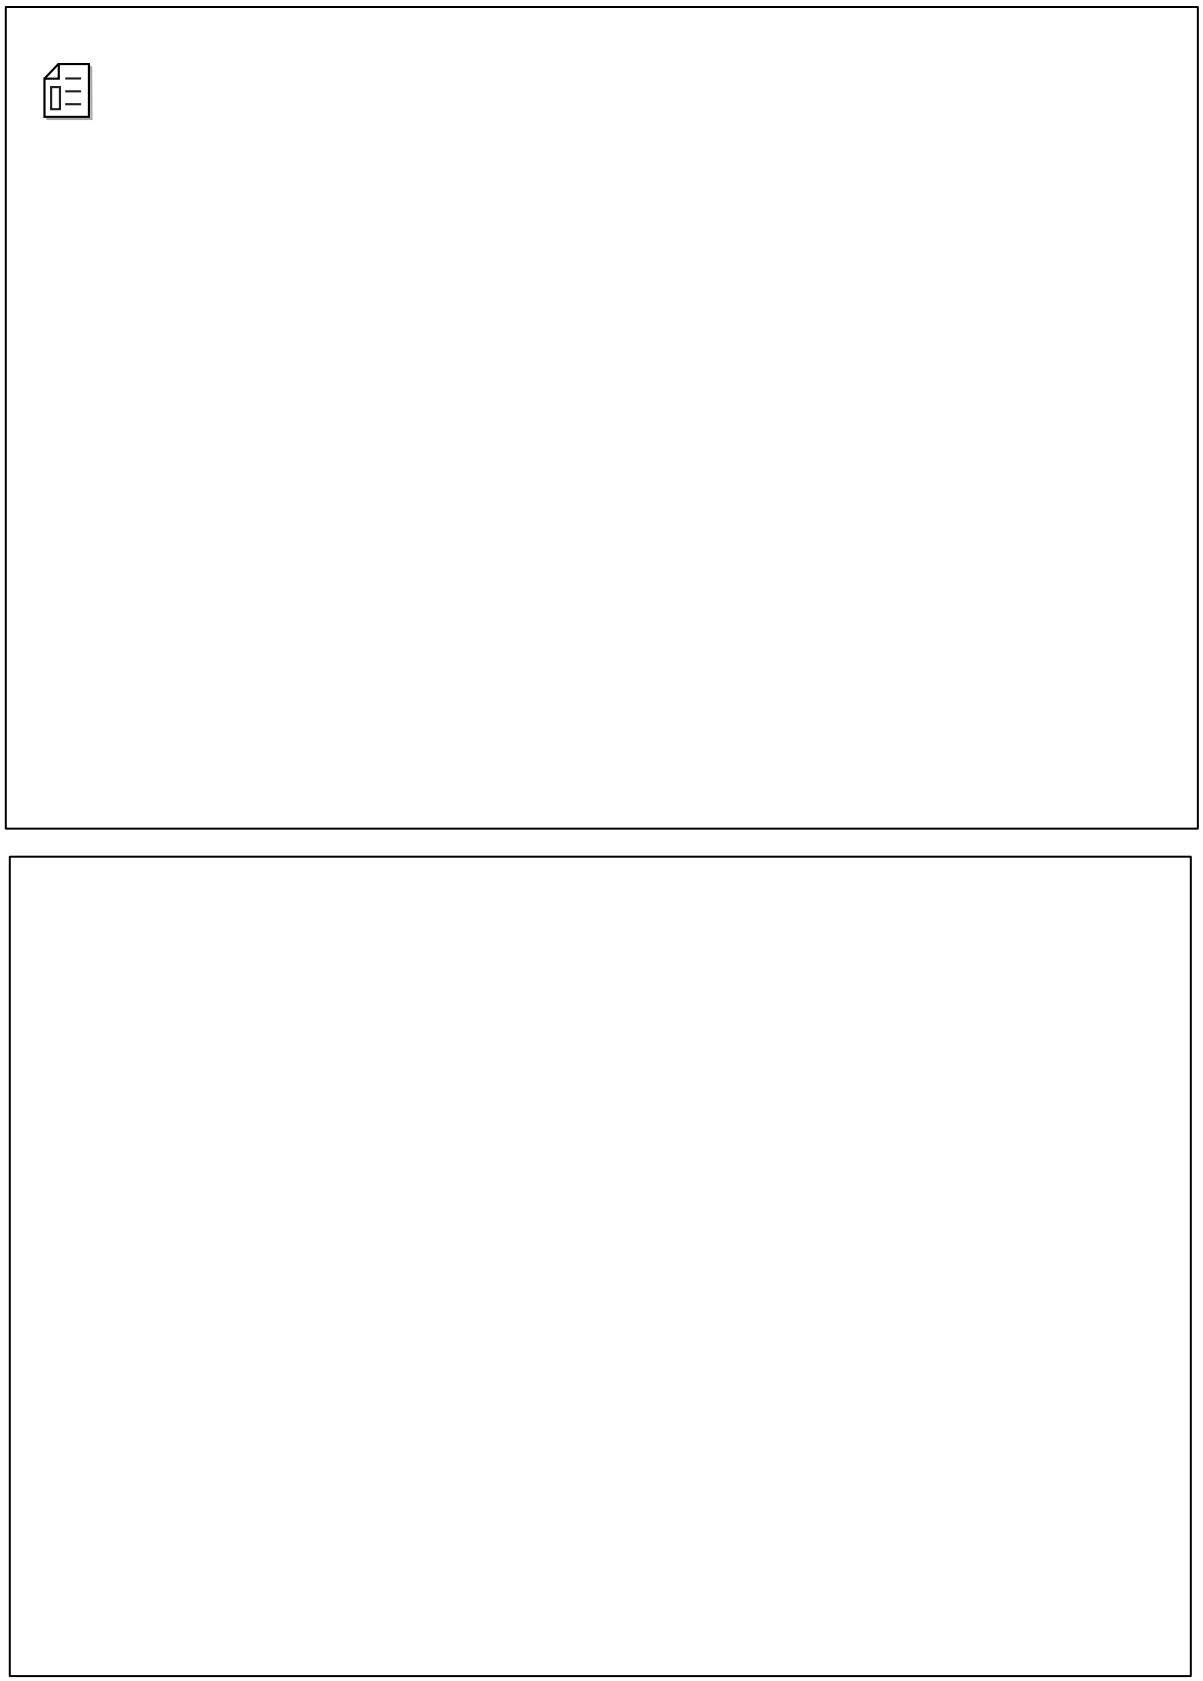

Column 4: Use this column to record whether each student is present on the day that the Grade 4 Maths test is administered. Complete this column on the day you are administering the Maths test (explained in Paragraph 5.19-5.20).

Column 5: Use this column to record the height of each pre-selected student who completes the Maths test. Complete this column straight after the class has completed the Maths test (explained in Paragraph 5.35). Enter '- 88' for all Grade 4 students who are not present on the day of the Maths test, and '- 99' if a student has severe physical disabilities which mean s/he cannot be measured.

Note that this column is only present on the first page of the Grade 4 Student Roster. You do not have to record the height of any students listed on subsequent pages of the Roster.

3.26 In most schools, you will need to complete two Grade 4 Student Rosters – i.e., one for each Grade 4 class included in the survey. However, in some schools, there will only be one Grade 4 class – so you will only complete one Grade 4 Student Roster. For these schools, the Grade 4 Student Roster will include pre-filled details for 22 girls and 22 boys, and you will still need to enter information on all other students in the class.

Figure 9: Example of a completed Grade 4 Student Roster

This Grade 4 class has 39 students. 22 students' names (11 girls, 11 boys) are pre-filled, and the fieldworker enters the names of the remaining students in the class from row ST23 onwards, using the class register. The fieldworker is careful not to duplicate any of the pre-filled students' names when entering the rest of the students' names on the Roster. After all names have been entered, the fieldworker uses the class register to enter information on student absence since 21 Meskerem 2011 E.C. <u>for all students</u> in Column 3. He will complete Column 4 (and Column 5 for pre-selected students) on the day the Maths test is administered.

Roster Booklet 4

3.27 Roster Booklet 4 contains the Grade 4 Student Roster Extra Sheets

Grade 4 Student Roster Extra Sheets

3.28 This booklet contains extra sheets to help fieldworkers complete the Grade 4 Student Roster where there are more than 70 students in a class.

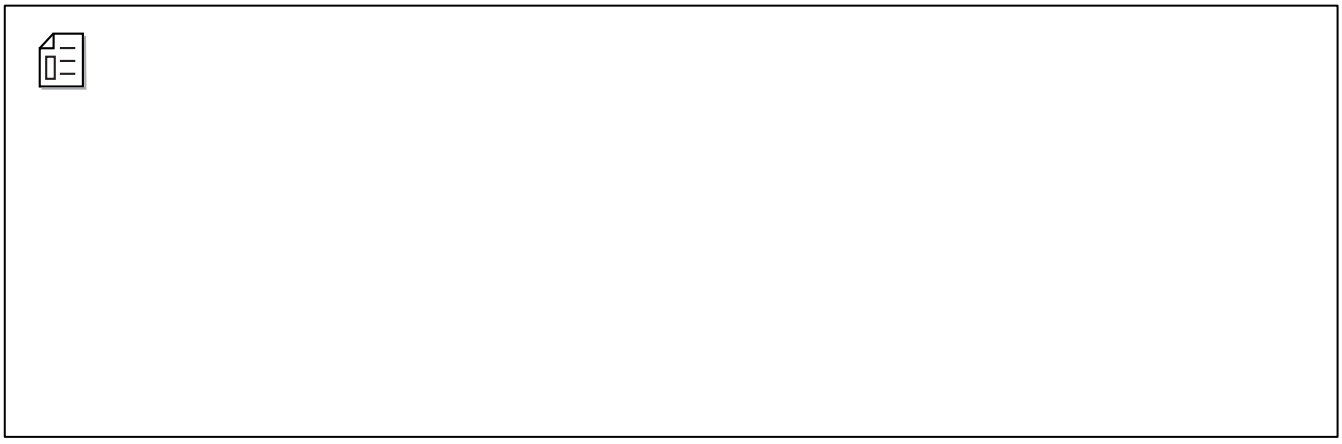

3.29 Many teams will not need to use these extra sheets, because we expect classes to have fewer than 70 students. However, when extra sheets are needed in a particular school, you should remove the number required and then store the rest carefully for your next school visits.

3.30 The Grade 4 Student Roster Extra Sheets are almost identical in appearance to the Grade 4 Student Rosters, except they do not have pre-filled School, Class or Student IDs. This allows you to enter the relevant School and Class IDs, and the Student IDs up to the number required for particularly large classes.

3.31 For example, in a class with 75 students, you would take 1 sheet from Roster Booklet 4, and use it to complete the list of student names in the class (see Figure 10). The appropriate RISE School ID and Class ID must be added to the top of every extra page used. The Student ID, Full Student Name and attendance information should also be completed, following exactly the same guidance as for the Grade 4 Student Roster. Column 4 should be left blank until the day of the Maths test.

3.32 Grade 4 Student Roster Extra Sheets should be stapled to the Grade 4 Student Roster in the correct order.

Figure 10: Example of completed Grade 4 Student Roster - Extra Sheet

In this example, one of the Grade 4 survey classes has 75 students. After completing the information for the first 70 students on the Grade 4 Student Roster, the fieldworker has taken a Grade 4 Student Roster Extra Sheet to complete information for the remaining 5 students in the class. He enters the RISE School ID and Class ID, then completes columns 1, 2 and 3 for each of the remaining students. He will complete Column 4 on the day the Maths test is administered. Note that unlike the Grade 4 Student Roster, the fieldworker has to enter the Student IDs in column 1 manually, because they are not pre-filled.

4. Completing the Grade 1 tests

4.1 This section includes guidance required to complete the Grade 1 test.

4.2 The Grade 1 test will be completed by selected Grade 1 students, and will be administered to one student at a time. The process for selecting Grade 1 students is described in this section.

4.3 You will need up to 10 minutes to provide each student with information and instructions for the test. Each student will then have 1 hour to complete the test. You should therefore allocate 2 periods for each test.

4.4 It is important to complete the assessment in a setting that allows the student to do their best. This means an environment that is relatively quiet, with good lighting, and free of distractions (for example other children playing, lots of noise or interruptions). In addition, the test should be completed at a table or a comfortable sitting arrangement so that the student can see the materials presented and easily reach the materials.

Note on test language

Your team will be provided with Grade 1 tests in the main language of instruction for the selected survey classes. In some regions, this will mean you have Grade 1 tests in the same language for every school, and in other regions, it will mean that you will have tests in multiple languages. For example, in Benishangul Gumuz, some schools will have Amharic as their main language of instruction, while other schools will have Berta as their main language of instruction. Before administering Grade 1 tests, confirm the main language of instruction for selected classes to ensure that you are using the right test language.

Selecting Grade 1 students

4.5 Grade 1 tests will only be administered to 28 students in total – you will use the Grade 1 Student Rosters to select these students. In schools where two Grade 1 classes have been selected for the survey, you will select 7 girls and 7 boys from each class. In schools where there is only one Grade 1 class, you will select 14 girls and 14 boys from that class.

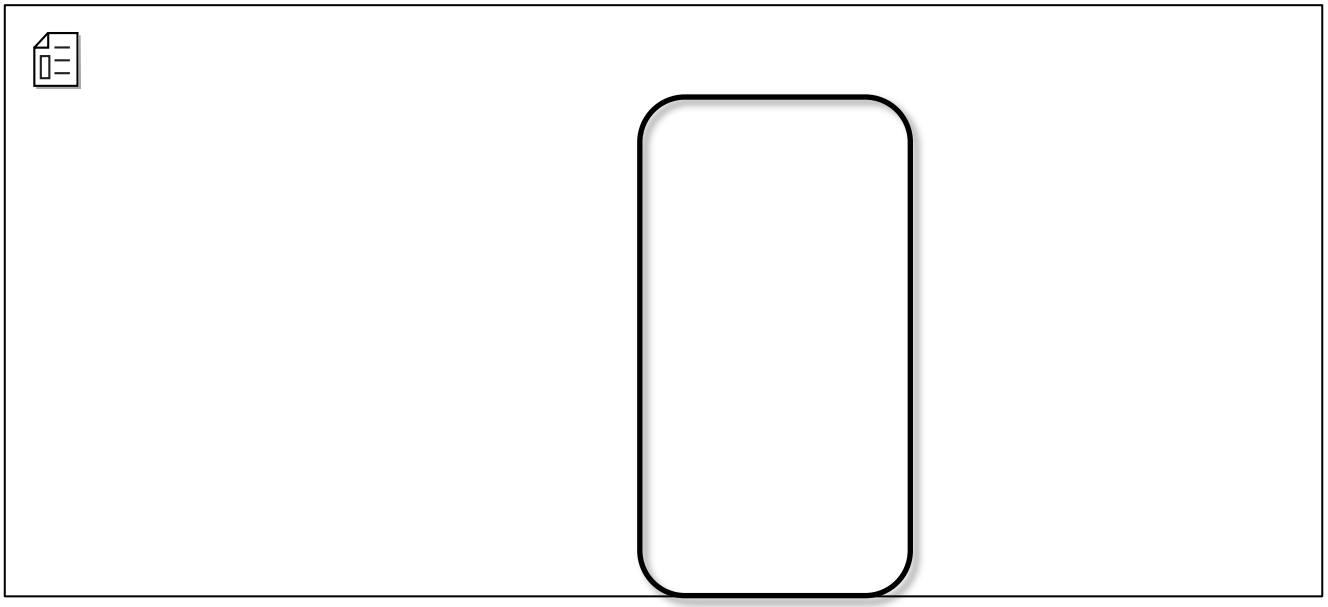

4.6 In this section, the process for using the Grade 1 Student Roster to select 7 girls and 7 boys from each class is described – but you will follow exactly the same process to select 14 girls and 14 boys from a single Grade 1 class. The only difference will be that the Grade 1 Student Roster will include pre-filled details for 22 girls (ST01 – ST22) and 22 boys (ST23 – ST44), rather than 11 girls and 11 boys.

On the first day you are administering the Grade 1 tests, you will start by selecting 7 Grade 1 girls for the survey.

- Start by finding out whether the first 7 girls on the roster (ST01 – ST07) are present in school today. If all these girls are present, then you will administer the test to these seven girls. Enter '01' for these girls, and '00' for all other girls on the roster.
- If one of the first seven girls is absent, enter '00' in the corresponding row. Now check whether the next girl on the list (ST08) is present on the day of the test. If yes, then enter '01' – this girl will be selected for the survey.

- If another of the first seven girls is absent, enter '00' in the corresponding row. Now check whether the next girl on the list (ST09) is present on the day of the test. If yes, then enter '01' – this girl will be selected for the survey.
- Repeat this process until you have selected 7 girls for the survey (out of ST01 – ST11). Make sure that you have entered '00' for all the girls who have not been selected for the survey (see Figure 11).

Figure 11: Selecting girls from the Grade 1 Student Roster

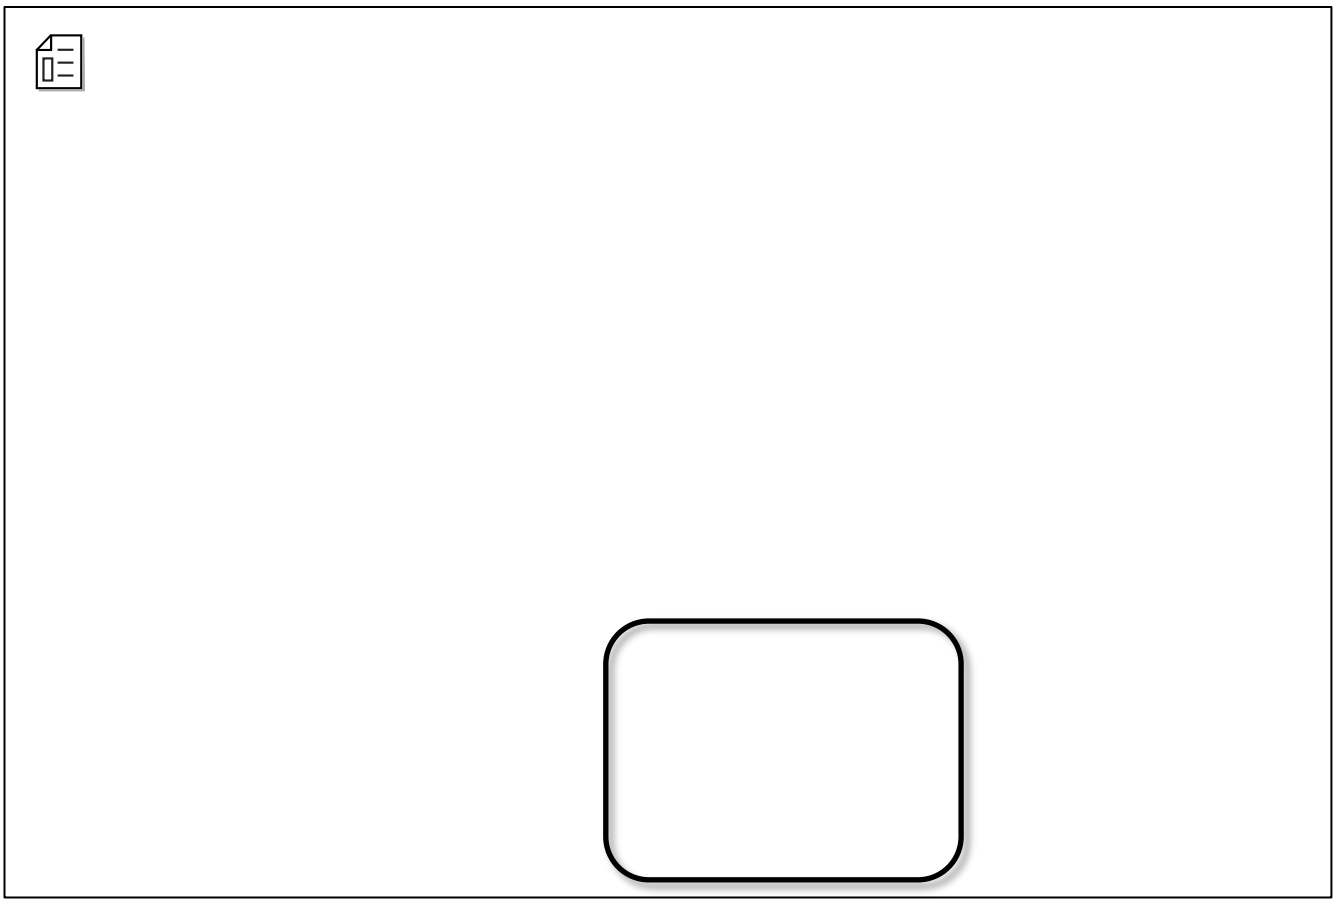

The fieldworker asks the class teacher whether the first 7 girls on the roster are attending school today. He finds that two of the girls (Sasha and Selamawit, ST03 and ST06) are not present, and so cannot be selected for the survey. So he enters '00' in Column 4 for them, and '01' for the girls who are present in school today (ST01, ST02, ST04, ST05 ST07). He has now selected 5 girls for the survey, but he needs to select 2 more. So he asks whether the next 2 girls (Kalkidan and Meron, ST08 and ST09) are present in school today. They are, and so he enters '01' in Column 4 for both girls. The fieldworker has now selected 7 girls for the survey, and the remaining girls on the list are not selected (Aziza and Anesa, ST10 and ST11), whether or not they are in school today. So he enters '00' in Column 4 for these girls. He will complete Column 5 after each selected student completes the Grade 1 test.

Next, you will follow the same process to select 7 boys to complete the Grade 1 test.

- Start by finding out whether the first 7 boys on the roster (ST12 – ST18) are present in school today. If all these boys are present, then you will administer the test to these seven boys. Enter '01' for these boys, and '00' for all other boys on the roster.
- If one of the first seven boys is absent, enter '00' in the corresponding row. Now check whether the next boy on the list (ST19) is present on the day of the test. If yes, then enter '01' – this boy will be selected for the survey.
- If another of the first seven boys is absent, enter '00' in the corresponding row. Now check whether the next boy on the list (ST20) is present on the day of the test. If yes, then enter '01' – this boy will be selected for the survey.
- Repeat this process until you have selected 7 boys for the survey (out of ST12 – ST22). Make sure that you have entered '00' for all the boys who have not been selected for the survey (see Figure 12).

Figure 12: Selecting boys from the Grade 1 Student Roster

The fieldworker asks the class teacher whether the first 7 boys on the roster are attending school today. He finds that the first three boys (Amanuel, Seid and Ferhan – ST12, ST13 and ST14) are not present, so he enters '00' in Column 4 for them. The next four boys are attending, so he enters '01' into Column 4 for them. The fieldworker has now selected 4 boys for the survey, but he needs to select 3 more. He checks whether the next three boys on the list (Semier, Usmah and Workensh – ST19, ST20 and ST21) are in school today, and he finds out that they are. So he enters '01' in Column 4 for these three boys, and now he has selected 7 boys for the survey. The fieldworker enters '00' in Column 4 for the last student (Natnael, ST22) as he is not selected for the survey. He will complete Column 5 after each selected student completes the Grade 1 test.

You will then repeat this process for the second Grade 1 class selected for the survey, selecting 7 girls and 7 boys from the second Grade 1 class. This means that you will select a total of 14 girls and 14 boys from Grade 1 for the survey.

In schools with only one Grade 1 class, the Grade 1 Student Roster will allow you to select 14 girls and 14 boys from that class.

Preparing Answer Sheets for the Grade 1 test

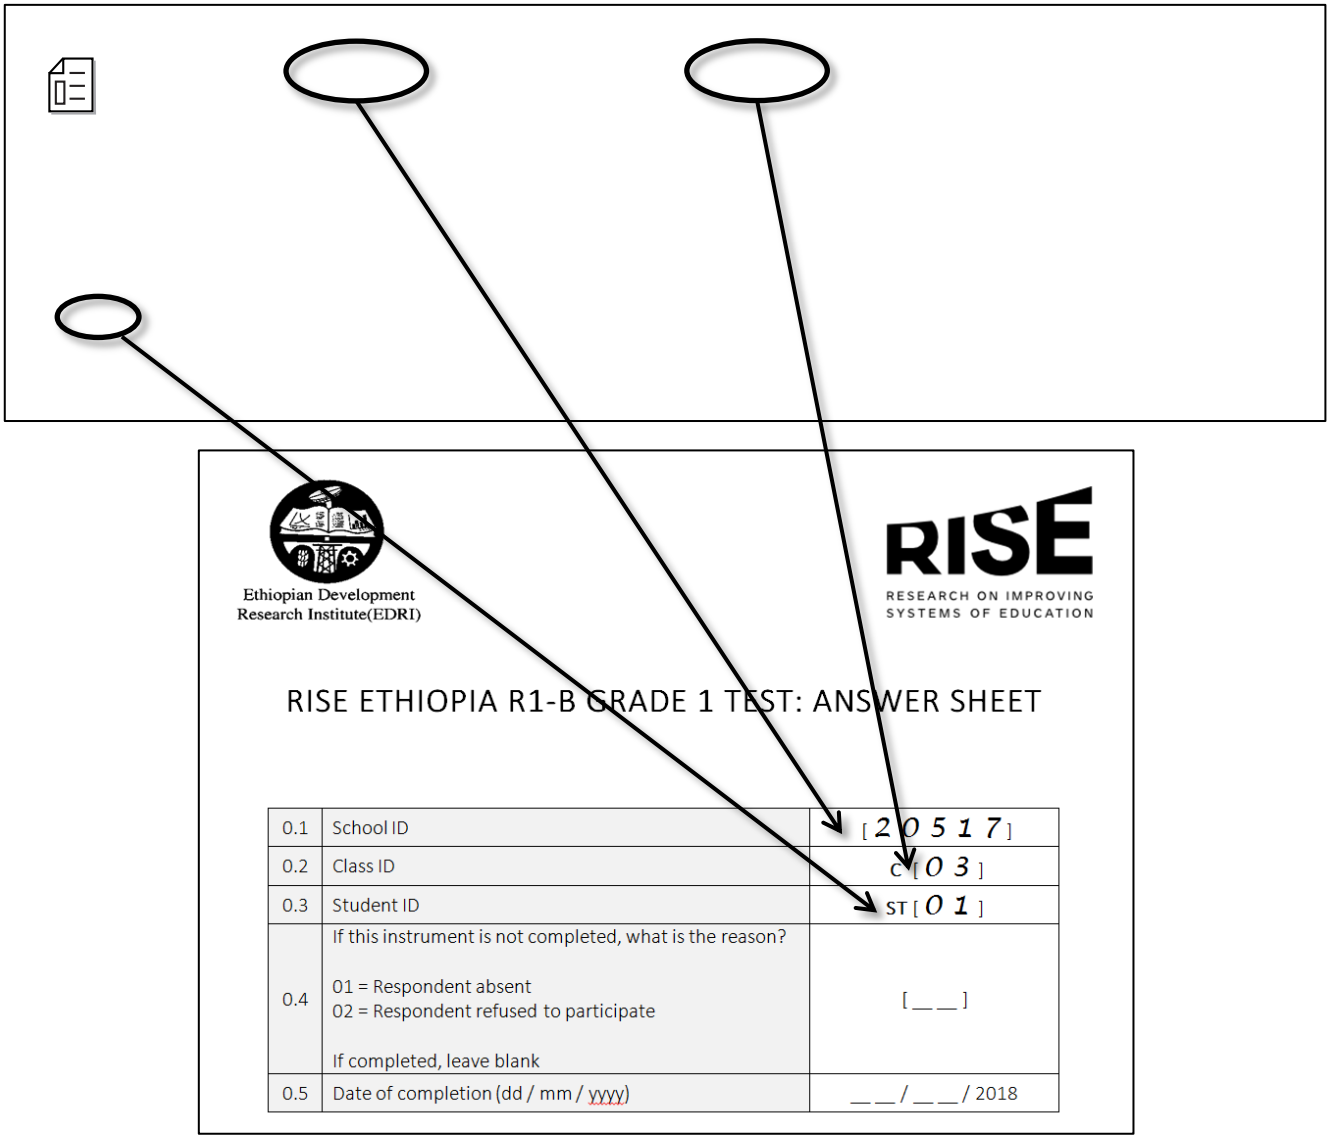

4.7 You will need the following materials for to administer the Grade 1 test:

- Grade 1 test Enumerator Booklet
- Grade 1 test Answer Sheet
- Grade 1 test Stimulus Materials

4.8 You will use the same Enumerator Booklet and the same Stimulus Materials for every Grade 1 student. Do not write on the Enumerator Booklet or Stimulus Materials, and do not allow students to write or draw on the Enumerator Booklet or Stimulus Materials.

4.9 You will use one Grade 1 Answer Sheet per student. Before administering the first Grade 1 test, you should complete the School ID, Class ID and Student ID on the Answer Sheet for all the Grade 1 students you selected for the survey (14 girls and 14 boys), using the Grade 1 Student Roster. Note that you will only prepare Grade 1 Answer Sheets for students who have been selected for the survey (column 5 = 01). See Figure 13.

Figure 13: Using the Grade 1 Student Roster to complete a Grade 1 Answer Sheet

In this example, the fieldworker is completing the Grade 1 Answer Sheet for Rediet Dawit Zalalaem. He does this because she has been selected for the survey (Column 4 of the Grade 1 Student Roster = 01). He carefully enters the correct School ID, Class ID and Student ID from the Grade 1 Student Roster on the Grade 1 Answer Sheet. The fieldworker then repeats this for the remaining 6 girls and 7 boys who have been selected for the survey.

Before the test

4.10 Before each student arrives, make sure that you have set up the materials and space so that the Enumerator Booklet and Answer Sheet are close to you, and the Stimulus Materials are in easy reach (but not visible when they are not being used).

4.11 When the first student arrives, check that you are using the correct Answer Sheet for the correct student. Ask the student for their full name; check the Student ID assigned to this name on the Grade 1 Student Roster, and then make sure that the right Student ID is recorded on the Answer Sheet you are using.

4.12 Read out the greeting and verbal assent statement, which is printed on the front of the Enumerator Booklet (and reproduced in Figure 14 below). Make sure you answer any questions asked by the student. If they give their verbal assent to participate, tick the 'verbal assent' box on their Answer Sheet. If they do not wish to participate, thank them and complete field 0.4 on their Answer Sheet to indicate that they refused to participate (=02).

Figure 14: Greeting and verbal assent statement for Grade 1 tests

Hello, my name is _____.

I am working for a research project supported by the Ministry of Education. We are here to learn about how children, like you, learn things and if they know how to play some games.

I will ask you some questions about stories and pictures. Some activities will be easy for you and others may be more of a challenge. Don't worry if you cannot do some things. We just want you to try your best.

You can stop and take a break if you need to. Just let me know. If you decide at any point that you'd like to stop, or that you don't want to do one particular game, that's okay too.

Do you understand? Do you have any questions?

Would you like to do these games with me?

Are you ready to start?

During the test

4.13 Read and present the items exactly as written, and in the order presented, in the Enumerator Booklet.

4.14 Record the student's responses on their Answer Sheet. Be careful to do this in the spaces that correspond to each question in the Enumerator Booklet. Score items exactly as indicated in the Enumerator Booklet.

4.15 Do not offer additional information or instructions to the student. Do not help the child to complete the items, and do not give hints. Speak clearly, slowly and with a neutral tone.

4.16 Provide neutral feedback and encouragement throughout. You can use the following suggestions:

- "I like how you are paying attention"
- "Thank you for answering my questions"
- "I can tell you are working hard"
- "Let's do some more"
- "You're working hard, let's keep going"
- "I know some of these may be hard, just try your best"

4.17 Follow Prompt rules and Stop rules as described in the Enumerator Booklet.

4.18 Give the student a break if they need one.

4.19 Provide feedback on practice items so that the student learns when they are completing a task correctly.

4.20 Self-correcting is allowed for all items. Record and score the student's final response, even if the change was from an incorrect to a correct response, or the other way around.

Guidance on Grade 1 test exercises

Language / Literacy exercises

EXERCISE #1: EXPRESSIVE VOCABULARY

1a – 1b **Materials: none**

Assesses the number of words a student can say for two common categories (food and animals). If a student repeats an animal / food, including saying something like "big elephant, baby elephant", or "black dog, brown dog", count only once. For foods, count only specific foods and not food categories – for example, 'fruits' and 'vegetables' are food categories, while 'bananas' and 'cabbage' are specific foods. Make sure you are aware of food and animal varieties that can be found in our survey locations.

EXERCISE #2: LETTER IDENTIFICATION

2a – 2n **Materials: Stimulus Materials Sheet #2**

Assesses a student's knowledge of letter names. Make sure to point clearly at each letter while keeping the other column covered.

EXERCISE #3: LETTER SOUND DISCRIMINATION

3a – 3c **Materials: none**

Assesses a student's knowledge of letter sounds. Read words slowly.

EXERCISE #4: LISTENING COMPREHENSION STORY

4a – 4e **Materials: none**

Assesses a student's ability to understand a story. Read the story exactly as written in the Enumerator Booklet in a clear reading voice. Then ask the questions that follow. If the child says something else (for example, begins making up her/his own story, or gives different answers), score the response as incorrect and re-direct the child by asking the next question. The child's response does not need to match the listed correct response word-for-word, but the response should be correct based on what happened in the story (and not what could have happened, or may sound reasonable).

EXERCISE #5: NAME WRITING

5 **Materials: blank piece of paper + pencil or pen + hard surface for writing**

Assesses a student's fine motor skills, and ability to write her/his own name. The enumerator should know how the student's name is spelled, including if the student writes her/his nickname, which is allowed. Discuss as a team how local names might be used and how they are spelled in the relevant language. Only the first name is required, not the father's name. The letters do not need to be on a straight line (for example, the writing may slant up or down), but they should be ordered next to each other.

You will score a response as correct (code = 1) if the written name includes:

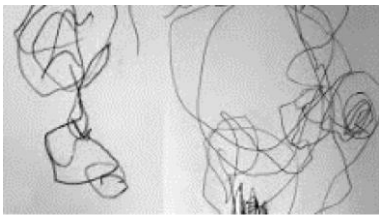

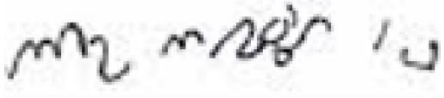

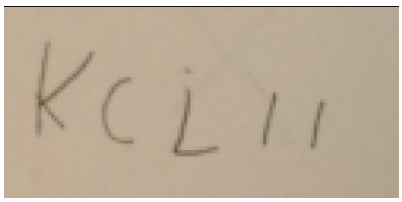

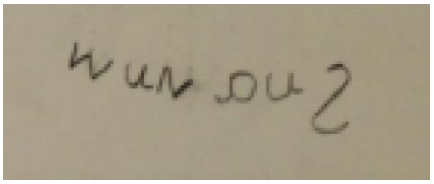

(a) all letters of the same name, with no extra letters;
(b) all letters are in the correct orientation (no backwards or upside down letters,

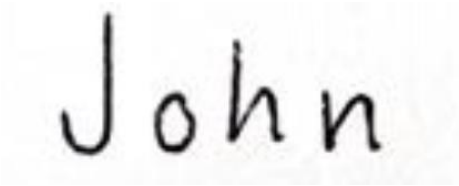

AND

(c) all letters are in the correct order.

If all three of these criteria are not met, the response is incorrect. Figure 15 indicates the incorrect codes (2, 3, 4 or 5) you should use, depending on how the child has written his/her name.

Figure 15: Examples of how to score Name Writing exercise

Scoring option	Examples of each score
Scribbles, no discernible symbols. Code = 5	
Symbol-like marks. Code = 4	
Non-name letters. Code = 3	 *(student's name is Christopher)*
Has letters in name, but name is not correct – letters are out of order; other mistakes are made. Code = 2	 *(student's name is Saumu)*

Child writes name correctly, including: all letters of name with correct orientation, letters in correct order. Code = 1	 *(student's name is John)*

EXERCISE #6: COPYING

6a – 6d **Materials: Stimulus Materials Sheet #6 + one blank piece of paper + pencil or pen + hard survey for writing**

Assesses a student's fine motor skills and ability to copy simple shapes. Provide the student with a blank sheet, and place this so that it covers the blank boxes beneath the shapes. Shapes drawn by students can be any size (larger or smaller than original shape), but should be scored according to the criteria in the Enumerator Booklet. If the child meets all stated criteria, you will give him/her a score of 2. If one criterion is missing, you will give the child a score of 1. If more than one criterion is missing, you will give the child a score of 0.

Criteria for each shape:

'X':

- There are two intersecting lines at approximate midpoints.
- The direction is closer to an X than a +.
- The length of all four "legs" are approximately equal.

Circle:

- The drawing is a curved or round figure.
- The figure is closed.
- There is no more than a 2:1 ratio between height and width.

Rectangle:

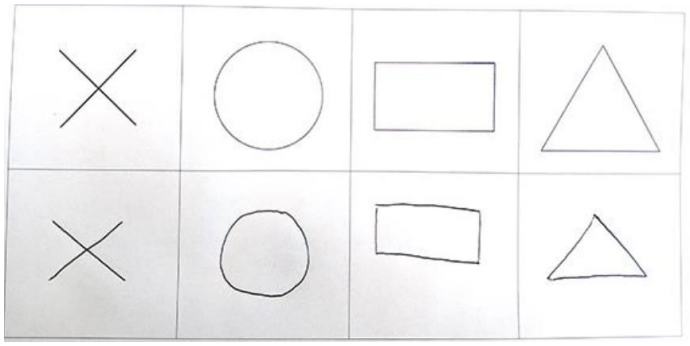

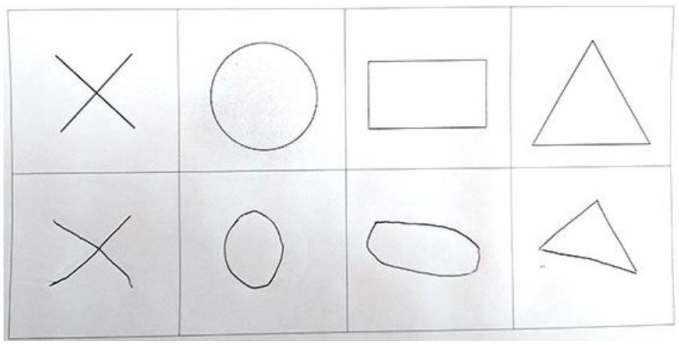

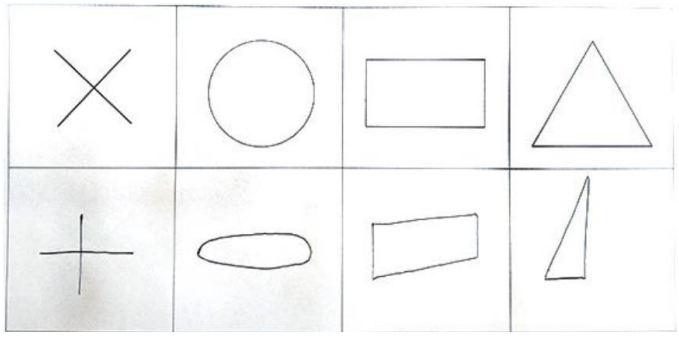

- Four clearly defined sides.
- Corners approximately 90 degrees.
- Parallel sides approximately equal.

Triangle:

- Three clearly defined sides.
- Sides approximately equal length.
- Sides meet at joints and do not substantially overlap.

Figure 16 provides examples of how you would score different responses from students.

Figure 16: Example of how to score Copying exercise

Example	Scoring
	• **X:** all criteria met (code = 2) • **Circle:** all criteria met (code = 2) • **Rectangle:** all criteria met (code = 2) • **Triangle:** all criteria met (code = 2)
	• **X:** although a bit irregular, all criteria met (2) • **Circle:** the shape does not exceed a ratio of 2:1, so all criteria met (2) • **Rectangle:** missing more than one criterion (0) – the form doesn't have four well-defined sides, the corners are not approx. 90 degrees and there are no sides parallel • **Triangle:** although a bit irregular, all criteria met (2)
	• **X:** missing a criterion (1) – the direction is closer to a '+' than an 'x' • **Circle:** missing a criterion (1) – the ratio between the height and width exceeds 2:1 • **Rectangle:** missing a criterion (1) – corners have more or less than 90 degrees • **Triangle:** missing a criterion (1) – bottom side is a lot shorter than other sides

EXERCISE #7: RECEPTIVE SPATIAL VOCABULARY

7a – 7e **Materials: Stimulus Materials Sheet #7**

Assesses a student's knowledge of position words (on, under, in front of, next to and in) by having the student point to a picture that shows the word. When you read the items, add emphasis to the position words (on, under, in front of, next to, in).

Mathematics / Numeracy exercises

EXERCISE #8: VERBAL COUNTING

8 **Materials: none**

Assesses a student's ability to count to twenty. Listen carefully as the student counts. Note if they skip or say a number out of order. The student may not go back and count again at any number. It is okay for students to use their fingers to count. Enumerators should not hold up their fingers while the student is counting.

EXERCISE #9: PRODUCING A SET

9a – 9c **Materials: 20 uniformly sized small objects that can be used for counting (e.g. stones, bottle caps) – not food items.**

Assesses a student's ability to count out a specific number of objects. The materials used should be small and easy for students to manipulate, but make sure that the objects do not present a danger for them. Avoid letting the student play with the counters or make a design. Do not correct the student if they lose count or skip numbers while counting. It should be clear how many counters the student gives you each time. It is not necessary that the student hands you the sets of objects – the student can push the sets towards you, or create a group on the table if they prefer.

EXERCISE #10: NUMBER IDENTIFICATION

10a – 10j **Materials: Stimulus Sheet #10**

Assesses a student's ability to identify numbers. Point clearly to each number. Do not cover any part of the number.

EXERCISE #11: NUMBER COMPARISON

11a – 11c **Materials: none**

Assesses a student's ability to compare and identify bigger and smaller numbers. When asking the questions, emphasize the comparison words: bigger or smaller.

EXERCISE #12: SIMPLE ADDITION AND SUBTRACTION

12a – 12d **Materials: 10 small stones that can be used for counting**

Assesses a student's ability to add and subtract single digits. Do not hold your fingers to indicate the number when asking each item. Do not move the counters to show the problem. It is not mandatory that the child uses those objects to count.

EXERCISE #13: FORWARD DIGIT SPAN

13a – 13e **Materials: none**

Assesses a student's short-term memory. Read numbers slowly and clearly.

EXERCISE #14: BACKWARD DIGIT SPAN

14a – 14e **Materials: none**

Assesses a student's short-term memory. Read numbers slowly and clearly.

Finishing the test

4.21 When all exercises have been administered, thank the student for their time and active participation. Before the student leaves, review the answer sheet to make sure you have administered all items, recorded all responses and scored all items. If you skipped an item or an exercise, make a note and administer the item/exercise before the student leaves. Retrieve all materials used.

4.22 Using the equipment provided by EDRI, you should then measure the height of the student (in centimetres), and record this next to their name in Column 5 of the Grade 1 Student Roster. The procedure to follow in order to take consistent measurements from each student will be covered in the fieldworker training. For any students who were not selected to complete the surveys, enter '- 88' in Column 5 of the Grade 1 Student Roster.

4.23 Post-assessment review: The Grade 1 test has not been adapted for implementation with students with severe disabilities. There will be some students, however, who participate and have some challenges in hearing the assessor, seeing the stimulus materials, etc. Complete the disability screen based on your observations during the assessment. It will help us to understand variation in child performance.

It is your responsibility to conduce the Grade 1 test in a quiet and comfortable environment, and to minimize distractions. However, even with good preparation, there may be occasional distractions such as loud noises, etc. Record any relevant distractions or disturbances using the post-assessment review.

5. Completing the Grade 4 tests

5.1 This section includes guidance required to complete the Grade 4 Maths test and Grade 4 Language test.

5.2 The Grade 4 Maths and Language tests will be completed by all Grade 4 students in the selected classes, and will be completed by all students in the class at the same time. For each test, you will need 20 – 30 minutes to provide students with instructions and to distribute the tests. Students will then have 45 minutes to complete each test. You should therefore allocate 2 periods for the Grade 4 Maths test, and 2 periods for the Grade 4 Language test.

5.3 Teachers should not be present during the test. Politely ask them to leave the classroom.

5.4 The two tests must be administered on different days, to avoid student fatigue. The Grade 4 Maths test should be the first test you administer to both classes, and the Grade 4 Language test should be administered to both classes on the next day.

5.5 It is very important that students receive full instructions before beginning a test. The following paragraphs explain the steps to take for the Maths test, which can then be repeated for the Language test (see Paragraph 5.36).

Note on test language

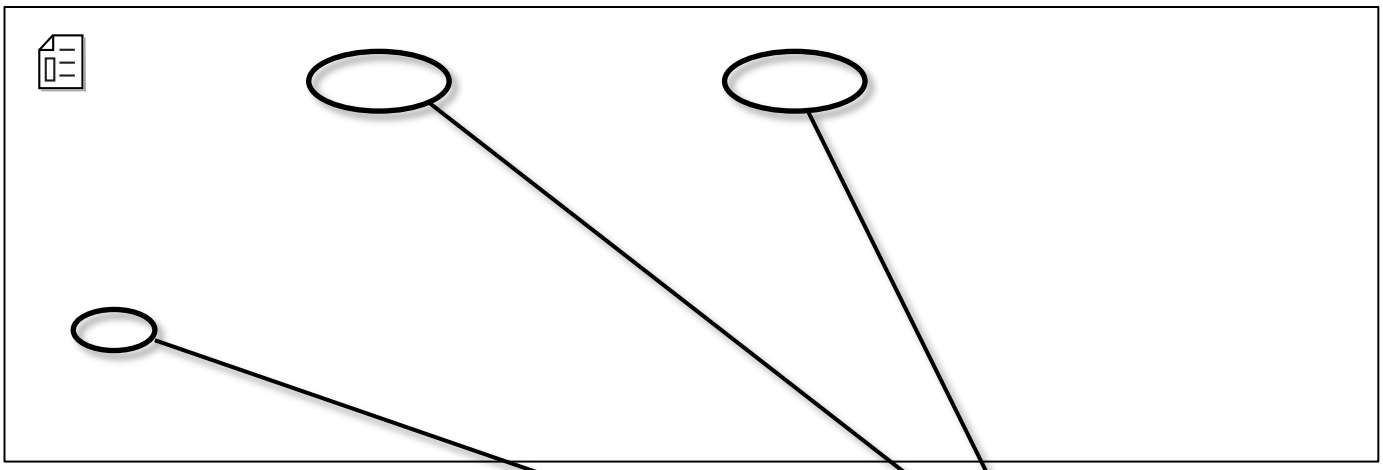

Your team will be provided with Grade 4 tests in the main language of instruction for the selected survey classes. In some regions, this will mean you have Grade 4 tests in the same language for every school, and in other regions, it will mean that you will have tests in multiple languages. For example, in Benishangul Gumuz, some schools will have Amharic as their main language of instruction, while other schools will have Berta as their main language of instruction. Before administering Grade 4 tests, confirm the main language of instruction for selected survey classes to ensure that you are using the right test language.

Preparing for the Maths test

5.6 Collect enough Grade 4 Maths Test Booklets based on the Grade 4 Student Roster for the class. Make sure you collect Maths Test Booklets; the subject is clearly written on the front of each Test Booklet.

5.7 You must prepare the Maths Test Booklets before you arrive at the classroom to administer to the test. Using information from the Grade 4 Student Roster for this class, you should complete the School ID, Class ID and Student ID (0.1, 0.2 and 0.3) on the front of each Test Booklet (see Figure 17). Note that you must do this for all Grade 4 students in each selected class.

Figure 17: Using the Grade 4 Student Roster to complete a Grade 4 Maths Test Booklet

0.1	School ID	[2 0 5 1 7]
0.2	Class ID	C [0 6]
0.3	Student ID	ST [0 1]
0.4	If this instrument is not completed, what is the reason? 01 = Respondent absent 02 = Respondent refused to participate *If completed, leave blank*	[__ __]
0.5	Subject	MATHS

Arranging the classroom

5.8 You should arrange the desks and chairs in the classroom to give as much space as possible for students to complete the tests and to minimise opportunities for students to copy each other's answers. You should also open windows, where appropriate, to maximise light in the classroom. Make sure that you are able to move easily around the room to supervise. It might be useful for you to move some students around the classroom so that they are not sitting next to their friends.

Informed consent

5.9 Before handing out the Maths Test Booklets, explain the survey to students in a language they can understand. You should use the information in Figure 3 as a guide. Once you have provided this introduction, ask students if they have any questions. Answer their questions before proceeding.

Test instructions

5.10 Explain to students how they should record their answers on the Test Booklet. This process is simple, but needs careful explanation. You should take time to explain and, if possible, prepare the blackboard as shown below before students arrive in the classroom. This will help to improve the quality of the explanation.

5.11 Explain the following to students:

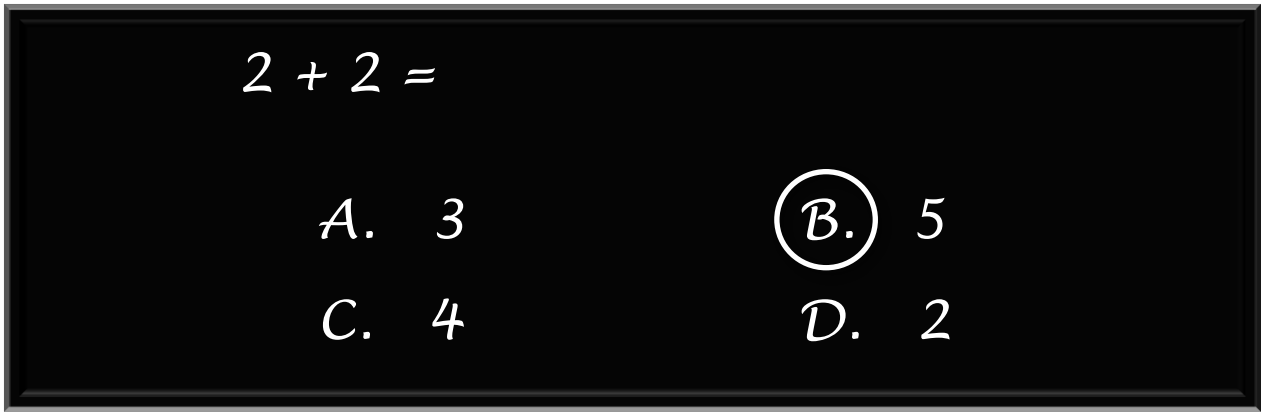

- They will have 45 minutes to complete the Maths test.

- They will read questions and record their answers in their Test Booklet (which you will give to them soon).
- It is a multiple-choice test, and students should consider all options and decide on their answer.

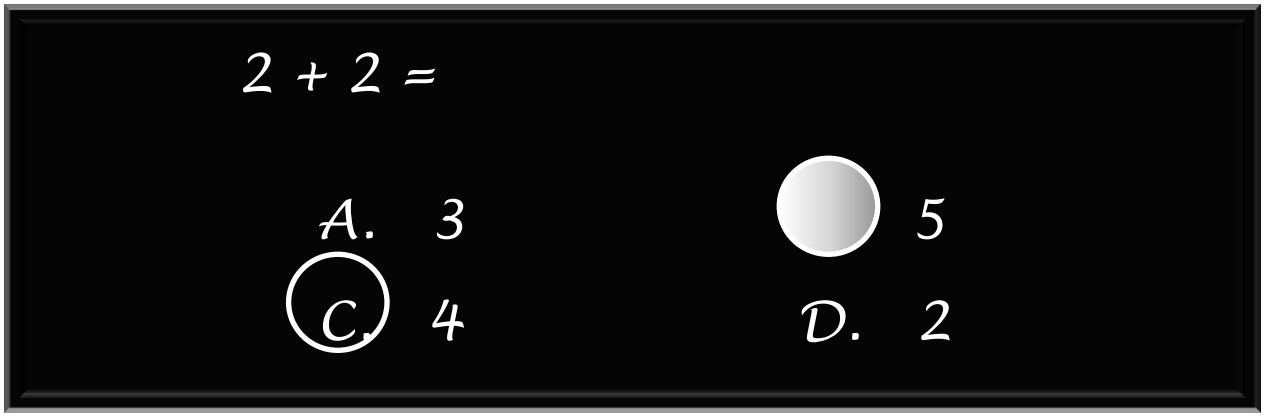

5.12 Next, demonstrate the following example (or an equivalent) on the blackboard. Write the question and answer options shown below on the blackboard, making sure that you write clearly so that all students can read what you have written.

5.13 Explain that this is an example of a question with four answer options: A, B, C, and D, and that students should record their answer by circling one of these options. Show them by circling one of the answers on the board:

5.14 Next, explain that if they change their mind and want to select another answer option, they should shade in the circle for their first selection and then circle the option they wish to select – as shown below.

5.15 Once you have completed this demonstration, ask students if they have any questions, and answer these questions before proceeding. Students may not always tell you if they have not understood – pay attention to any students who look like they are confused or who may not have been listening, and go through your example again if necessary.

5.16 Tell students that they can do any rough work on their Test Booklets. Tell the students that the Maths test has 25 questions, and that they will have 45 minutes to complete the test. Emphasise that there is no rush. Inform students that the questions are sometimes easy and sometimes harder, but that they should take their time to think through as much as they can, and answer with their best knowledge. Tell students that they will have to remain in their seat until the end of the test, and so they should take their time and answer carefully. If students are not sure about a question, they can skip it and come back to it later. If they are really not sure about a question, they should make their best guess.

5.17 Explain that the test will take place in test conditions. This means: no talking, no looking at textbooks, no looking at each other's work, no using a calculator, a mobile or any other mathematical equipment (e.g. rulers).

Handing out Test Booklets

5.18 Once you have provided students with these instructions, you may hand out the Test Booklets. It may take some time to hand out all of the Test Booklets, and so you must tell students not to start the test until you instructed them to. Tell students that once they have received it, they should place their Test Booklet face down on their desks until you tell them to turn over the tests.

5.19 Students' names are not written on the Test Booklets, so you must make sure that the correct Test Booklet is given to each student by checking against the Student Roster. Using the example in Figure 17 above, you would pick up the Test Booklet with ST01 on the front, and call out Gete's name. If she is present, ask her to come and collect the Test Booklet with ST01 written on it, and then enter '01' in Column 4 of the Grade 4 Student Roster to indicate that she is present for the Maths test.

5.20 If a student is not present or does not want to participate, enter the relevant code in field 0.4 on their Test Booklet, and then put their Test Booklet to one side. Enter '00' for this student in Column 4 of the Grade 4 Student Roster, and then proceed through all the remaining names on the Grade 4 Student Roster.

5.21 When you have handed out all Test Booklets, check that all students have one. If there are any students without Test Booklets, check the Student Roster to identify whether they have been missed. It may be that the student is sitting with the wrong class, that there was a mistake when distributing the Test Booklets, or some other reason. Use your judgement at the school to make sure that all students who should be in the classroom all have the correct Test Booklet.

Completing student information on Test Booklets

5.22 When all students have a Test Booklet in front of them, tell the class that before starting the test, you will ask them to answer three simple questions about themselves and record their answers on the front page of the Test Booklet. Tell students to turn over their Test Booklets, and to look at the first box on the front of the Test Booklet, which says 'TO BE COMPLETED BY STUDENTS'.

5.23 Read out the first question in this box – 'Are you a boy or a girl?' – and ask students to tick one box as their answer. Walk around the classroom and check that all students are doing this correctly, and help any students who are not following the instructions. Ask students to put their hand up when they have finished this question.

5.24 When all students have put their hands up, read out the second question in this box – 'How old are you?' – and ask students to write their age in years in the box. Walk around the classroom and check that all students are doing this correctly, and help any students who are not following the instructions. Ask students to put their hand up when they have finished this question.

5.25 When all students have put their hands up, read out the third question in this box – 'What language do you mainly speak at home?' – and ask students to tick the box next to the language that they use most often at home to speak to their parents, their siblings etc. You can give an example for yourself, explaining which box you would tick. Walk around the classroom and check that all students are doing this correctly, and help any students who are not following the instructions. Ask students to put their hand up when they have finished this question.

5.26 When all students have put their hands up, walk around the classroom and make sure that all students have completed all three questions on the Test Booklet.

Beginning the test

5.27 Write the start and end time of the test on the board, and remind students that they have 45 minutes for the test. Re-state that their test results will not be reported to teachers, and so they should relax and try seriously to answer all questions with care. Remind students to raise their hands to ask questions if they need to. Now tell the students to open their Test Booklets and begin the test.

Monitoring the test

5.28 There must be 1 fieldworker in each classroom when a test is taking place. Do not leave the classroom while students are completing the test. You should be available to answer student questions throughout the test. If a student is unsure how long they have, or unsure how to record their answers in the Test Booklet, you should help them.

5.29 While students are completing tests, walk around the classroom and check visually that students are recording their answers using the method you demonstrated. Do this often within the first 10 minutes of the test, so that you can quickly help any student who is confused. Continue to circulate and monitor regularly throughout the test period. You should also observe in case any students are talking to each other or helping each other – where necessary, remind students that they have to complete the test alone.

5.30 Where help is provided, it is important that you do not give advice that helps students to answer the questions. This includes any clarifications about what a word means, or the meaning of any mathematical notation. If students can't understand a test question because they can't understand the language used, fieldworkers should not help them by translating into a different language.

5.31 If a student tells you that s/he has finished the test before 45 minutes is up, they should be reminded that they need to stay seated until the end. Encourage them to check all their answers.

5.32 10 minutes before the end of the test, announce to students that they have 10 minutes left and that they should begin to check their answers. One announcement with 10 minutes left is sufficient. Do not make multiple announcements, as this can make students anxious.

5.33 If there are any students who have not finished after 45 minutes, you may give them an extra 15 minutes to complete the test. Make sure that these students are not disturbed by others if they are working during this extra period of time.

Completing the test

5.34 Once the test is complete, request that students remain their seats. Move around the classroom and collect all Test Booklets. You do not have to do this in a specific order. Keep all Test Booklets and add any prepared but incomplete Test Booklets (i.e. for students who were absent or did not want to complete the test) for the class together.

5.35 It is important that you walk around and make sure that you collect Test Booklets from every student, rather than allowing students to leave and hand in their Test Booklets as they go. This is to make sure that all papers are collected.

5.36 Once you have collected all papers, you need to measure and record the heights of all pre-selected students listed on the Grade 4 Student Roster who have completed the Grade 4 test, using the equipment provided by EDRI. You should decide whether it is more appropriate to ask the pre-selected students to stay behind while you measure their heights, OR whether it is more appropriate to take the pre-selected students outside and ask the rest of the students to stay in the classroom. The first option may be more appropriate in rural areas, and the second option may be more appropriate in urban areas. In either case, you should explain that pre-selected students have been randomly selected, and that is why you are measuring their heights. You can explain that you are doing this to understand their growth over time.

Whether you are doing this inside or outside the classroom, ask each pre-selected student (girls and boys) to come up one by one so that you can measure their height. Record this next to their name in Column 5 of the Grade 4 Student Roster. The procedure to follow in order to take consistent measurements from each student will be covered in the fieldworker training. For any pre-selected students who were not present for the Maths test, enter '- 88' in Column 5 of the Grade 4 Student

Roster.

There may be other students in the class (who were not pre-selected) who want to be measured as well. It is best not to do this at the same time you are measuring pre-selected students. This is to avoid confusion when recording their heights, and because all students in the class may then want to be measured – this will be very time consuming. Instead, tell any other students (who were not pre-selected) who want to be measured that you will try and arrange this at the end of the fieldwork visit in the school.

5.37 Before students leave, count the number of Test Booklets you have to make sure that you have the same number that you handed out. Please do not leave any Test Booklets behind – if teachers or principals request copies of the tests, request their contact information and EDRI will arrange for example copies to be shared with them later on.

Conducting the Language test

5.37 You will conduct the Grade 4 Language test following the same process as the Grade 4 Maths test, with the adjustments shown in Figure 18.

Figure 18: Conducting Grade 4 Language test - similarities and differences with Grade 4 Maths test

Step	Process
Preparing for the Language test	Same process, but use Grade 4 Language Test Booklets. Prepare Test Booklets only for students who completed the Maths test, as recorded on the Grade 4 Student Roster.
Arranging the classroom	Same process
Informed consent	Not necessary, explanation already given
Test instructions	Same process, but can have a quicker 'recap' explanation on the board as students will be familiar with the instructions from the Maths test
Handing out Test Booklets	Same process, but you do not need to complete Column 4 of the Grade 4 Student Roster (as you have already done this).
Completing student information on Test Booklets	Same process
Beginning the test	Same process
Monitoring the test	Same process
Completing the test	Same process, but you do not need to measure students' heights (as you have already done this).

6. Contacting the Household Survey Team

6.1 A linked Household Survey will be taking place at the same time as the RISE School Survey. The purpose of the Household Survey is to collect background information on the 'RISE Students' who participate in the School Survey.

6.2 The Household Survey Team will have information on the household locations of all 'pre-selected' students who were identified during the pre-survey tracking exercise (see Box 1 and Box 2). However, they will only collect data from the households of 28 Grade 1 RISE Students, and 28 Grade 4 RISE Students.

6.3 Who are the RISE Students?

Grade 1 RISE Students are those who:

(a) were pre-selected during the tracking exercise, and
(b) completed the Grade 1 test.

This should be a total of 14 girls and 14 boys from each school (see Figure 19).

Grade 4 RISE Students are those who:

(a) were pre-selected during the tracking exercise, and
(b) completed the Grade 4 Maths test.

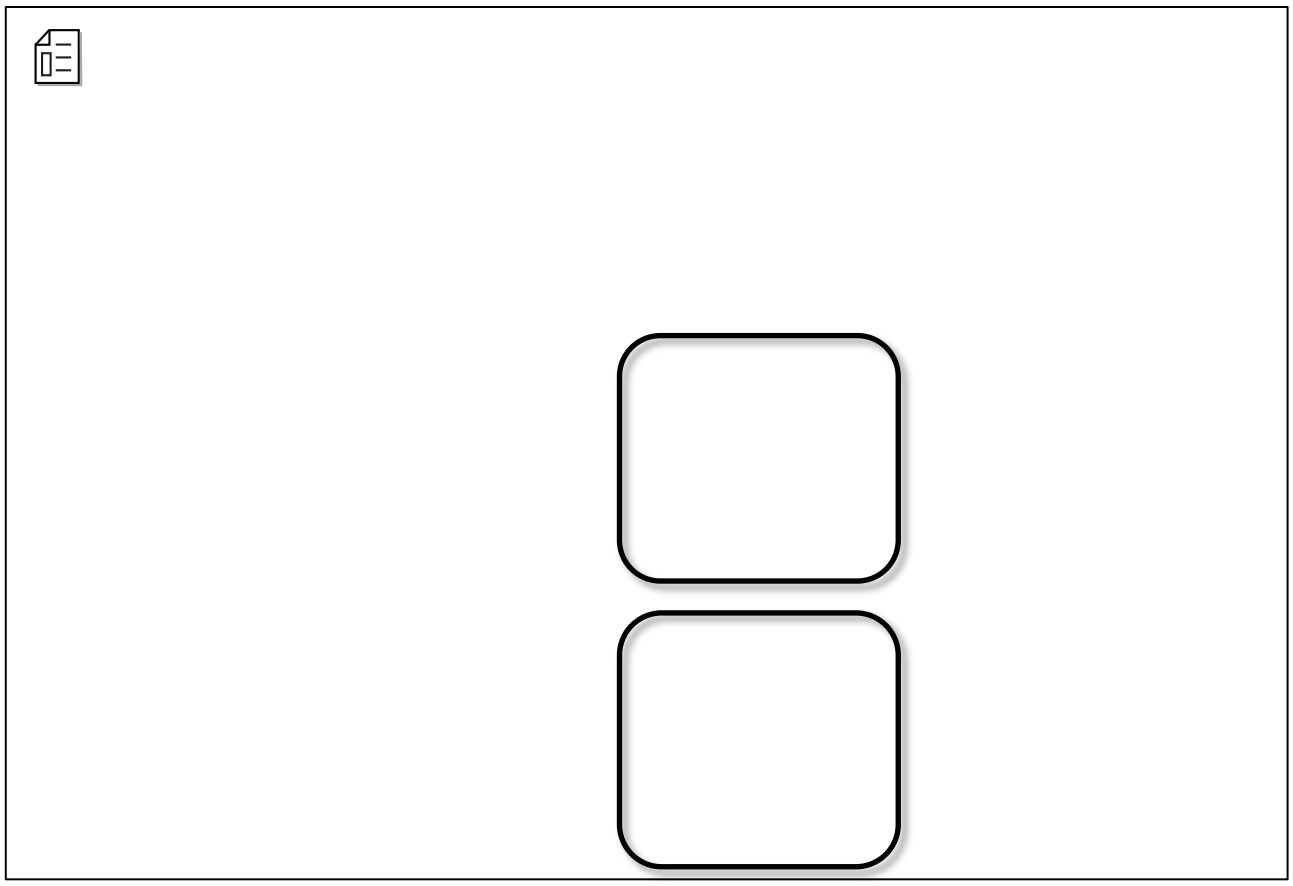

However, more than 14 girls and 14 boys from the pre-selected list of students may have completed Grade 4 Maths tests. The school survey supervisor will therefore simply select the required number of students from the Grade 4 Student Rosters as the Grade 4 RISE Students (see Figure 20).

6.4 After all Grade 1 and Grade 4 tests have been completed at a school, the School Survey supervisor is responsible for identifying Grade 1 and Grade 4 RISE Students (see Figure 19 and Figure 20). The school survey supervisor should check that there are completed Grade 1 Answer Sheets and completed Grade 4 Maths Test Booklets for all RISE students.

6.5 The School Survey supervisor should then contact the supervisor of the Household Survey Team in the region, to inform him/her which students have been selected as RISE Grade 1 Students, and which students have been selected as RISE Grade 4 students. When providing this information, it is very important to clearly state the School ID, the Class ID, the Student ID and full name of each student. If the Household Survey team is close enough, the School Survey and Household Survey supervisors can meet in person to share this information.

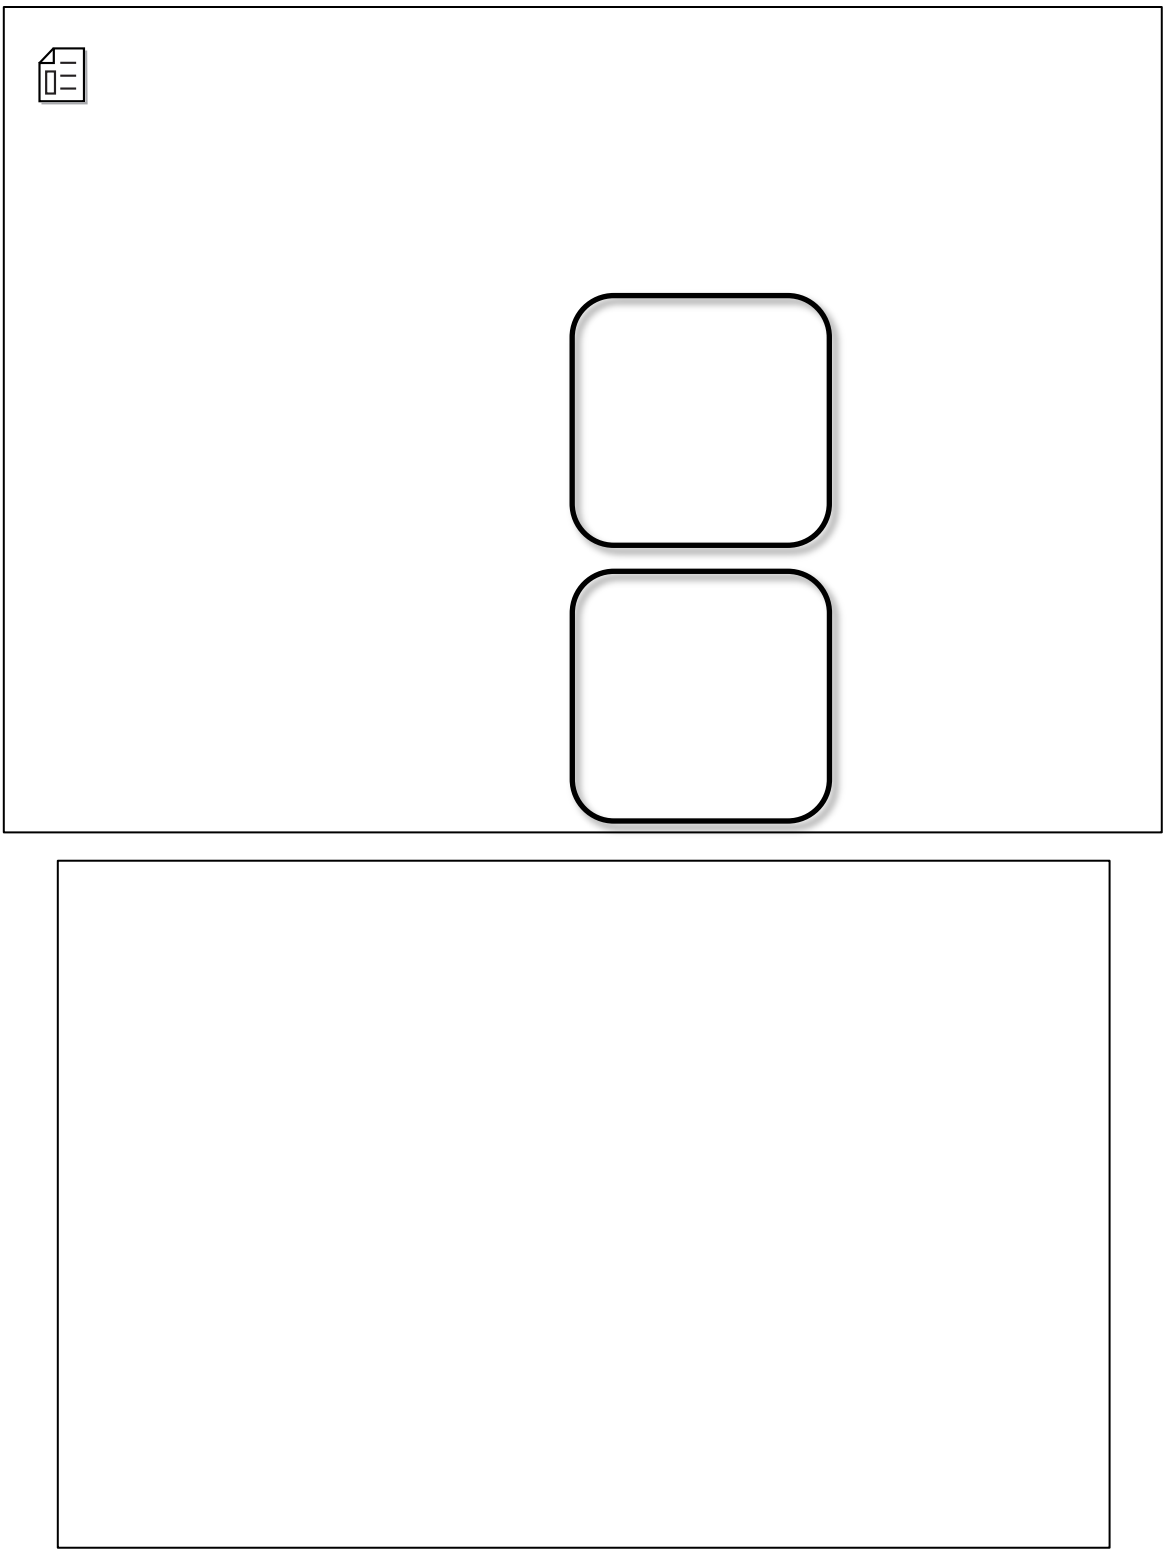

6.6 The Household Survey supervisor will then arrange for household data collection to take place at the households of the 28 Grade 1 RISE students and 28 Grade 4 RISE students from that school.

Figure 19: Using the Grade 1 Student Roster to identify Grade 1 RISE Students

7 girls and 7 boys were selected as 'RISE students' from this Grade 1 class – indicated by '01' in Column 4 for the following students: ST01, ST02, ST04, ST07, ST08, ST09, ST15, ST16, ST17, ST18, ST19, ST20, ST21. The school supervisor repeats this process for the second Grade 1 class (not shown here), and then checks that there are completed Grade 1 Answer Sheets for RISE students from both classes. She then contacts the household survey supervisor to provide the list of Grade 1 RISE students from this school.

Figure 20: Using the Grade 4 Student Roster to identify Grade 4 RISE Students

The Grade 4 Student Roster indicates that 28 students in this class completed the Maths test (column 4 = 01). 17 of these students were 'pre-selected' for the survey (ST01 – ST22). The Grade 4 RISE students will be identified from students ST01 – ST22, but we only want 7 girls and 7 boys to be selected from this class. So the school survey supervisor simply counts the first 7 girls who were present for the Maths test and the first 7 boys who were present for the Maths test – these are the Grade 4 RISE students from this class. The school supervisor repeats this process for the second Grade 4 class (not shown here), and then checks that there are completed Grade 4 Test Booklets for RISE students from both classes. She then contacts the household survey supervisor to provide the list of Grade 4 RISE students from this school.

Note: if there is one Grade 4 class in a school, then the Grade 4 Student Roster will allow you to select 14 girls and 14 boys as 'RISE students' from this class, following the same process described above.

7. Completing the Principal Questionnaire

7.1 This section includes guidance required to complete the Principal Questionnaire.

7.2 You will complete the Principal Questionnaire using a CAPI (Computer Assisted Personal Interview) program on a tablet. There will be one tablet provided to each fieldwork team.

7.3 The Principal Questionnaire should be completed by interviewing the school principal. The interview should last approximately 45 minutes.

7.4 Only in exceptional circumstances, when the principal is not present on any fieldwork day, may the Principal Questionnaire be completed by the vice principal. In this case, the vice principal should answer all questions with reference to the principal. For many questions about the school, this is straightforward. For questions that relate to the principal's background (e.g. years of experience), this will require judgement on the part of the vice principal. If the principal is not present at the school, it is likely that s/he can still be contacted by phone. The vice principal should contact the principal by phone and gather any information required.

7.5 Before starting the interview, make sure you do the following:

- 0.1 Enter the School ID.
- 0.2 Indicate who the respondent is for this questionnaire.
- 0.3 As the principal has given their informed consent for the survey to take place, it is unlikely that s/he will not complete the Principal Questionnaire. However, if a principal does not wish to complete a questionnaire, record the relevant code in this field.
- 0.4 Enter the date of the interview.

Guidance on specific questions in the Principal Questionnaire

MODULE 1

Q.5, 6, 7 Enter completed years only. For example, if the principal has been working at this school for 5.5 years, enter '05' (i.e., the principal has completed 5 years working at the school).

Q.10a - h Read out all the answer options each time for Q.10a – h, and ask the principal to indicate which answer option is most appropriate for them.

Q.14 Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for them.

Q.15 'GEQIP-E' stands for the General Education Quality Improvement Programme for Equity. It is a package of education reforms implemented by the Ministry of Education together with international donors such as the World Bank. GEQIP started in 2001 E.C.; note that GEQIP E refers to the latest set of the reforms, which is being implemented from 2011 E.C. to 2015 E.C., and we are interested in knowing whether the principal has heard of GEQIP E specifically.

Q.17	'Performance for results' is the new financing modality that will be implemented as part of GEQIP-E. It means that 20% of the GEQIP funds will be released to the government at the start of GEQIP-E and the remaining 80% will only be released once an agreed set of targets and indicators has been achieved and verified.
Q.18	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for them.

MODULE 2

Q.5, Q. 6	A Resource Centre is a structural addition to schools which provide support for children with special education needs. The resource centre serves as a hub within a local community and provides services relating to assessment, training and specialised support, as well as providing support to local mainstream schools to ensure inclusive education for these learners.
Q.7	If the school offers one half-day shift, make sure you record whether this shift takes place in the morning (=02) or in the afternoon (=03)
Q.9	'Self-inspection' refers to an inspection carried out at the school as part of the School Improvement Plan. Make sure that the principal understands this before recording their answer.
Q.10	'Independent' inspection refers to a rating given by the General Inspection Directorate. Make sure that the principal understands this before recording their answer.
Q.11	This question refers to the most recent independent inspection.
Q.16	If the schools provides meals to students, make sure you find out who provides these meals and select the correct answer option accordingly.
Q.23, Q.29, Q.35	'All required languages' refers to all languages which are used as a medium of instruction for the indicated grade.
Q.48	Read out all answer options, and ask the principal to indicate which answer option is most appropriate for the girls' club at this school.
Q.53	If staff from the school have received training on providing education for students from pastoralist communities, make sure you find out which staff have received this training and select the correct answer accordingly.
Q.54	If the schools provides teaching and learning materials specifically designed for students with disabilities, make sure you find out who provides these materials / how they are funded and select the correct answer option accordingly.
Q.55	If staff from the school have received training on providing education for students from with disabilities, make sure you find out which staff have received this training and select the correct answer accordingly.

MODULE 3

Q.5, Q.7, Q.9, Q.10, Q.17, Q.18, Q.19	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.
Q.20a -d	Read out all the answer options each time for Q.20a – h, and ask the principal to indicate which answer option is most appropriate for the school.
Q.22a - i	Read out the examples provided for each of the answer options. The principal's responses to Q.22a – i should add up to 100. If this is not the case, ask the respondent to reconsider and revise their responses.
Q.23	'Most influential' means the person who has the final say on how school grant funds are spent at the school.
Q.26	If the school provided information to the Education Management Information System (EMIS) on more than one occasion last academic year, enter the most recent month when this happened.
Q.30	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.

MODULE 4

Q.1, Q.3	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.
Q.4a – c, Q.5 a – c	Read out all the answer options each time for Q.4a – c and Q.5a – c, and ask the principal to indicate which answer option is most appropriate for the school.
Q.6, Q.7, Q.8	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.
Q.12 a – c	The principal's responses to Q.12a – c should add up to 100. If this is not the case, ask the respondent to reconsider and revise their responses.

MODULE 5

Q.2, Q.4, Q.5	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.
Q.6, Q.7, Q.8	Enter the contribution amount in Birr in each box. In each box, include only the amount which parents are expected to pay the school. For example, if parents buy textbooks for their children but this is not required by the school, do not include this in the 'textbook contribution' amount. If no payment is made to the school for a particular service, enter '00'.
Q.11, Q.12, Q.13	Read out all the answer options, and ask the principal to indicate which answer option is most appropriate for the school.

MODULE 6

Q.7 Enter the contribution amount in Birr in each box. In each box, include only the amount which parents are expected to pay the school. For example, if parents buy textbooks for their children but this is not required by the school, do not include this in the 'textbook contribution' amount. If no payment is made to these school for a particular service, enter '00'.

MODULE 7

All Qs NOTE: This module must be completed by consulting written records, and not just by asking the principal for this information. If the principal cannot personally provide you with the required written school records, thank them for their participation, and ask to meet the appropriate member of staff who can give you these records. If student records are not available in the requested format, enter '-88' as guided by the CAPI program.

8. Completing the School Facilities Observation

8.1 This section includes guidance required to complete the School Facilities Observation.

8.2 You will complete the School Facilities Observation using a CAPI (Computer Assisted Personal Interview) program on a tablet. There will be one tablet provided to each fieldwork team.

8.3 The School Facilities Observation must be completed by walking around the school and entering information based on what you observe. For some questions, detailed below, you will need to ask the principal or another member of staff to provide you with the required information.

8.4 If any of the selected classes are located at satellite sites (see Paragraph 1.6), you will complete one School Facilities Observation for the main school site and each satellite site where selected classes are taught. If you are completing the School Facilities Observation at a satellite site, record this before you begin completing the observation (field 0.3); additionally, record the Class IDs of all classes taught on this site.

Guidance on specific questions in the School Facilities Observation

Q.10 Ask a teacher or the principal whether there is normally an electricity supply in the school compound.

Q.12 Record information from your observations, but also by talking to students. For example, do they have regular access to the radio? Does it work? You should ask whether the radio is generally available for students to use, and not whether the individual students you talk to use the radio. Note that this refers to radio(s) which students can use, and not those used exclusively by teachers or other staff.

Q.13 Record information from your observations, but also by talking to students. For example, do they have regular access to computers? Does the computers work? You should ask whether the computers are generally available for students to use, and not whether the individual students you talk to use the computers. Note that this refers to computers which students can use, and not those used e.g. for administrative work exclusively by teachers or other staff.

Q.14 Record information from your observations, but also by talking to students. For example, do they have regular access to the library? You should find out whether the library is generally open and available for students to use, and not whether the individual students you talk to use the library. Note that a library could include a book cupboard or store if students regularly borrow books from it.

Q.15 A pedagogical centre is a room where teaching and learning materials are prepared and stored (i.e., separate from classrooms). Record information from your observations, but also by talking to teachers. For example, do they regularly use the pedagogical centre, or is it just used for storage?

Q.17 This question applies only to drinking water, not water for other purposes. It applies to drinking water for students and not for school staff.

Q.24 The school budget is a document which indicates how funds are being spent in the school year. A 'recent' school budget is one which is dated 2009 E.C., 2010 E.C. or 2011 E.C. 'Displayed in a public place' means that the budget should be easily viewable in an area accessed by students, parents and teachers (e.g., in the school yard), not inside a school office or classroom.

Q.25 The School Improvement Plan (SIP) is the plan prepared by the PTSA (Parent Teacher Student Association) to strengthen learning outcomes at the school. The implementation of School Improvement Plan activities is funded by the school grant.

A 'recent' School Improvement Plan is one which is dated 2009 E.C., 2010 E.C. or 2011 E.C. 'Displayed in a public place' means that the School Improvement Plan should be easily viewable in an area accessed by students, parents and teachers (e.g., in the school yard), not inside a school office or classroom.

Q.26 The School Report Card presents EMIS information about the school, compared to other schools in the woreda.

A 'recent' School Report Card is one which is dated 2009 E.C., 2010 E.C. or 2011 E.C. 'Displayed in a public place' means that the School Report Card should be easily viewable in an area accessed by students, parents and teachers (e.g., in the school yard), not inside a school office or classroom.

9. Fieldworker conduct

9.1 There are a number of basic principles that all fieldworkers and supervisors must follow throughout the survey:

1. Provide sufficient information to participants so that they understand why you are conducting a survey in their school.
2. Make sure participants have a chance to offer their informed consent or to decline participation. Remember that participants can decline to participate even after data collection has started.
3. Be polite, and treat all participants with respect.
4. Arrive at the stated time and never keep participants waiting.
5. Avoid 'leading' participants to any particular answer. You should, however, clarify the meaning of any questions if required using the information in this manual.
6. Avoid doing any harm to participants.
7. Treat everything that participants tell you as confidential.
8. Never make promises to participants that you cannot keep.
9. Never make up answers or information for the survey.
10. Avoid any inappropriate behaviour during fieldwork, including bribing participants; sexual misconduct; buying or selling goods from participants; lending or borrowing money or goods from participants.

9.2 During fieldworker training, you will be asked to sign a document to indicate that you have understood and agreed to this code of conduct. Supervisors and fieldwork coordinators will also be asked to sign documents indicating that they will both adhere to this code of conduct, and that they are responsible for ensuring that all those involved in the study adhere to the code of conduct.

9.3 During fieldwork, if you observe any deviation from this code of conduct, you must report this to the fieldwork coordinators, who will be based at EDRI in Addis Ababa during fieldwork. Appropriate action will be taken if any fieldworkers or supervisors are found to be engaging in inappropriate behaviour during data collection. Fieldwork coordinators will visit school survey teams intermittently during the fieldwork period, to ensure that data collection activities are being conducted to the highest standard possible.

10. Students with disabilities

10.1 It is possible that some of the Grade 1 and Grade 4 students in the RISE survey will have disabilities. You should offer the Grade 1 tests and Grade 4 tests to all selected students (as described in Sections 4 and 5 of this manual).

10.2 If needed, you should enquire whether there are additional resources available at a school to assist students with disabilities to complete the Grade 1 or Grade 4 tests (i.e. a sign language teacher for deaf students, or a fellow student who can read out questions for visually impaired students).

10.3 If a pre-selected student has severe disabilities and s/he tells you that s/he cannot complete the test, then you should enter code '03' in field 0.4 on their Answer Sheet (for the Grade 1 test) or Test Booklet (for Grade 4 tests). Please note that this code is not indicated on the instruments, so you should refer back to this section of the fieldworker manual if you are unsure which code to enter in these cases.

10.4 As described in Section 6, 'RISE Students' will usually be those who (a) were pre-selected during the tracking exercise and (b) have completed the Grade 1 or Grade 4 test. However, if a pre-selected student did not complete the Grade 1 or Grade 4 test due to severe disabilities, s/he may still be selected as a 'RISE student' for the household survey.

10.5 This is because we do not want to exclude students from the household survey based on disability. In fact, the household survey will allow us to collect important information about the extent of students' disabilities and how this affects their schooling.

Annex 1: Checklist for fieldwork schedule

General		
1	Grade 1 and Grade 4 shifts have been identified, and the schedule will be planned based on these shifts.	
2	All student tests are planned for timetabled periods and do not overlap with breaks.	
Rosters		
3	Roster Booklet 1 is the first instrument that will be completed.	
4	Roster Booklets 2, 3, and (if needed) 4 will be the second, third and fourth instruments completed.	
Grade 1 student tests		
5	Time has been allocated to prepare Grade 1 Answer Sheets in advance.	
6	Only pre-selected Grade 1 students (28 in total) from pre-selected Grade 1 classes will complete tests.	
7	Grade 1 tests will be conducted in a quiet area / empty classroom where children will not be disturbed.	
Grade 4 student tests		
8	Time has been allocated to prepare the cover sheets of the Grade 4 Test Booklets in advance.	
9	All Grade 4 students in pre-selected Grade 4 classes will complete tests.	
10	The first Grade 4 test will be the Maths test.	
11	Periods have been allocated for all selected Grade 4 classes to complete tests (2 periods per test).	
12	Grade 4 students will only complete 1 test per day, so they do not get too tired.	
Principal Questionnaire and School Facilities Observation		
13	A time has been arranged for the principal to complete the Principal Questionnaire.	
14	Time has been allocated for a fieldworker to complete the school facilities observation.	
Support		
15	A sufficient number of fieldworkers have been assigned to administer Grade 1 tests.	
16	1 fieldworker has been assigned to support each Grade 4 class while they complete their tests.	
17	1 fieldworker has been assigned to administer the principal questionnaire.	
18	1 fieldworker has been assigned to complete the school facilities observation.	
19	Plenty of time has been allocated to check all instruments are correctly complete.	
20	Plenty of time has been allocated to follow up with participants if instruments are incorrect or incomplete.

Information for Participants:
Explaining the 2011 E.C. RISE Ethiopia School Survey

We are visiting your school to invite you to participate in a study of Ethiopian schools. The project is called RISE Ethiopia, and it is examining the quality of primary education in seven Ethiopian regions: Amhara, Benishangul Gumuz, Oromia, SNNPR, Somali, Tigray and Addis Ababa. The project is funded by international organisations, and is being conducted by the Ethiopian Development Research Institute (EDRI, Addis Ababa), Addis Ababa University and the University of Cambridge (UK). Findings from the research project are intended to help government officials and school-level stakeholders in Ethiopia and in other countries to improve the quality of primary education.

If you agree to take part in this study, we plan to collect information from randomly selected Grade 1 and Grade 4 students at your school. Each Grade 1 student will be asked to complete one test, and each Grade 4 student will be asked to complete two tests (a Maths test and a Language test). Each test will take 1 – 2 periods to complete.

We also plan to collect background information on the school from the principal, as well as information about the school infrastructure and available resources. At the end of the school year, we will return to your school to collect further information that will help us to understand changes over one academic year.

The information we collect in this study will be made anonymous. This means it will not be possible to identify students, teachers, principals or schools from the data we produce. Additionally, students' test results will not be shared with teachers, students or anyone else at the school.

Your participation in this survey is voluntary – you may choose not to participate, and even if you do agree to participate you may withdraw at any time. If you are happy to participate, your involvement is valuable to the RISE Ethiopia research project, and will help provide important information to improve the quality of education in Ethiopia. If you do not want to participate, please inform one of the researchers. Thank you for your time.
